

UNIX SYSTEM ADMINISTRATION HANDBOOK

SECOND EDITION

Evi Nemeth
Garth Snyder
Scott Seebass
Trent R. Hein

Prentice Hall PTR

Upper Saddle River, New Jersey 07458

Table of Contents

FOREWORD	xxiv
FOREWORD TO THE FIRST EDITION	xxvi
PREFACE	xxviii
ACKNOWLEDGMENTS	xxxix

BASiC ADMiNiSTRATiON

CHAPTER 1 WHERE TO START

The Sordid History of UNIX	1
Contemporary UNIX Products.	3
How to Use this Book	3
System Administration 101.	4
Notation and Typographical Conventions.	5
System-Specific Information.	6
How to Use your Manuals.	6
Organization of the Man Pages.	7
man: Read Manual Pages.	8
Essential Tasks of the System Administrator.	9
Adding and Removing Users.	9
Adding and Removing Hardware.	9
Performing Backups.	10
Installing New Software.	10
Monitoring the System.	10

Troubleshooting	10
Maintaining Local Documentation	10
Auditing Security	10
Helping Users	11
System Administration under Duress	11
Recommended Supplemental Reading	12

CHAPTER 2 BOOTING AND SHUTTING DOWN

Introduction	13
Bootstrapping	13
Automatic and Manual Booting	14
Steps in the Boot Process	14
Kernel Initialization	14
Hardware Configuration	15
System Processes	15
Operator Intervention (Manual Boot Only)	16
Startup Scripts	16
Multi-User Operation	17
A Stroll through the BSD Startup Scripts	17
A Sample /etc/reboot	18
A Sample /etc/rc.single	21
A Sample /etc/rc	23
A Sample /etc/rc.local	27
A Stroll through the ATT Startup Scripts	31
Run Levels and the inittab File	31
A Sample /etc/bcheckrc	32
A Sample /etc/brc	34
Task-Specific Scripts	36
Specifics for Various Operating Systems	39
What if the System Won't Boot?	42
Hardware Problems	42
Defective Boot Blocks	43
Damaged Filesystems	43
Improperly Configured Kernels	44
Errors in Startup Scripts	45
Rebooting and Shutting Down	45
Turning Off the Power	45
shutdown: The Genteel Way to Halt the System	46
halt: A Simpler Way to Shut Down	47
reboot: Quick and Dirty Restart	47
Sending init a TERM Signal	47
telinit: Change init's Run Level	47
Killing init	48

CHAPTER 3 ROOTLY POWERS

Introduction	49
The UNIX Model of Ownership	49
Ownership of Files	49
Ownership of Processes	50
The Superuser	50
Choosing a Root Password	51
Becoming root	52
sudo: A Limited su	52
Other Important Users	54
daemon: Owner of Unprivileged Software	54
bin: Owner of System Commands	55
sys: Owner of the Kernel and Memory Images	55
nobody: Owner of Nothing	55

CHAPTER 4 THE FILESYSTEM

Introduction	56
Deconstructing the Filesystem	57
Organization of the Filesystem	58
Types of Files	58
Regular Files	59
Directories	60
Character and Block Device Files	60
UNIX Domain Sockets (BSD)	60
Named Pipes (ATT)	61
Hard Links	61
Symbolic Links	61
File Permissions	62
The Setuid and Setgid Bits	62
The Sticky Bit	62
The Permission Bits	63
Changing Permissions	64
Assigning Default Permissions	64
Inodes	65

CHAPTER 5 CONTROLLING PROCESSES

Introduction	68
Components of a Process	68
PID	69
PPID	69
UID and EUID	69
GID and EGID	70
Priority and Nice Value	70

Control Terminal	70
The Life Cycle of a Process	70
Signals	72
Process States	74
kill: Send Signals	76
nice and renice: Influence Scheduling Priority	77
ps: Monitor Processes	78
top: Monitor Processes Even Better	81
nohup: Protect Background Processes	82
Errant Processes	82
CHAPTER 6 ADDING NEW USERS	
Introduction	85
Adding Users	85
Editing the /etc/passwd File	86
Setting an Initial Password	90
Creating the Home Directory	91
Copying in the Startup Files	91
Setting the Mail Home	92
Editing the /etc/group File	92
Recording Accounting Information	93
Updating the User Database and Phone Book	93
Setting Quotas	94
Verifying the New Login	94
Removing Users	94
Disabling Logins	94
Password Aging	95
Pseudo-Logins	95
CHAPTER 7 DEVICES AND DRIVERS	
Introduction	96
Device Numbers and Jump Tables	98
Adding a BSD Device Driver	99
Adding an HP-UX Device Driver	101
Adding an IRIX Device Driver	104
Device Files	105
Naming Conventions for Devices	105
Loadable Kernel Modules	106
CHAPTER 8 SERIAL DEVICES	
Introduction	109
Standards for Signals and Connectors	109
Alternative Connectors	112

Table of Contents

The Mini DIN-8 Variant	112
The DB-9 Variant	112
The RJ-45 Variant	113
The Yost Standard for RJ-45 Wiring.	114
Hard and Soft Carrier.	116
Hardware Flow Control.	117
Cable Length.	117
Software Configuration for Serial Devices.	117
Configuration of Hard-Wired Terminals.	118
The Login Process.	119
The /etc/ttytab and /etc/ttys Files.	119
The /etc/ttytype File.	120
The /etc/gettytab File.	121
The /etc/inittab File.	121
The /etc/gettydefs File.	123
Solaris and sacadm.	123
Terminal Support: The termcap and terminfo Databases . . .	124
Special Characters and the Terminal Driver.	124
stty: Set Terminal Options.	124
tset: Set Options Automatically.	126
How to Unwedge a Terminal.	127
Modems.	128
Modulation Protocols.	128
Error Correction Protocols.	129
Data Compression Protocols.	129
Dial-Out Configuration: /etc/phones and /etc/remote. . .	129
Bidirectional Modems.	130
Debugging a Serial Line.	131
Using a Breakout Box.	132

CHAPTER 9 ADDING A DISK

Introduction.	133
The SCSI Standard.	133
Disk Geometry.	137
An Overview of the Installation Procedure.	139
Creating Device Entries.	139
Formatting a Disk Drive.	139
Partitions and Labels.	140
Filesystems.	142
Mounts and the fstab File.	143
Enabling Swapping.	145
f sck: Check and Repair Filesystems.	146
Specifics for Various Operating Systems.	148
Solaris.	148

HP-UX	153
IRIX	156
SunOS	159
OSF/1	164
BSDI_____,	166

CHAPTER 10 PERIODIC PROCESSES

Introduction	171
cron: Schedule Commands	171
Format of Crontab Files	173
Changing Crontabs	175
Some Common Uses for cron	175
Processing Appointment Calendars	176
Cleaning the Filesystem	176
UUCP Polling	177
Accounting	177
Network Distribution of Configuration Files	178
Specifics for Various Operating Systems	178

CHAPTER 11 BACKUPS

Introduction	179
Backup Devices and Media	179
Floppy Disks	180
Floptical	180
Cartridge Tapes	181
Nine-Track Magnetic Tapes	181
Write-Once CD-ROM	182
8mm Cartridge Tapes	182
4mm DAT Tapes	183
Jukeboxes and Stackers	183
Summary of Media Types	183
Setting Up an Incremental Backup Regime	184
Dumping Filesystems	184
Dump Sequences	186
Selecting a Dump Sequence	188
Motherhood and Apple Pie	189
Perform All Dumps from One Machine	189
Label your Tapes	189
Pick a Reasonable Backup Interval	190
Choose Filesystems Carefully	190
Make Daily Dumps Fit on One Tape	190
Make Filesystems Smaller than your Dump Device	191
Keep Tapes Off-Site	191

Limit Activity During Dumps.	191
Check your Tapes.	192
Prepare for the Worst	192
Restoring from Dumps.	192
Restoring Individual Files.	193
Interactive Restore.	194
Restoring Entire Filesystems.	195
Dumping and Restoring for Upgrades.	196
Other Archiving Programs.	196
tar: Package Files.	196
cpio: ATT-ish Archiving.	197
dd: Twiddle Bits.	198
volcopy: Duplicate Filesystems.	198
Using Multiple Files on a Single Tape.	198

CHAPTER 12 SYSLOG AND LOG FILES

Introduction.	200
Throwing Away Log Files.	200
Rotating Log Files.	201
Archiving Log Files.	202
Finding Log Files.	203
Files NOT to Manage.	204
Specifics for Various Operating Systems.	205
syslog: The System Event Logger.	206
Configuring syslogd.	207
Config File Examples.	210
Sample syslog Output.	212
Designing a Logging Scheme for your Site.	213
Brides of syslog.	214
Debugging syslog.	214
Using syslog in Programs.	216

CHAPTER 13 CONFIGURING THE KERNEL

Introduction.	218
Differences Between ATT and BSD.	219
When to Configure the Kernel.	219
Installing a New System.	219
Adding Device Drivers.	220
Tuning Table Sizes.	220
Building a BSD Kernel.	221
Auditing the System's Hardware.	222
Creating a Configuration File in SYS/conf.	222
Creating the Kernel's Compilation Directory.	223

Running conf ig.	223
Running make depend.	223
Building the Kernel.	223
Installing the Kernel.	224
Testing and Debugging the Kernel.	224
Documenting the Kernel.	225
Creating a BSD Configuration File.	225
The machine Keyword.	226
The cpu Keyword.	226
The ident Keyword.	227
The maxusers Keyword.	227
The options Keyword.	227
The config Keyword.	229
The controller, tape, disk, and device Keywords.	231
The pseudo-device Keyword.	233
A Sample Configuration File.	234
Configuring a Solaris (ATT) Kernel.	237
The Solaris Kernel-Building Area.	237
Configuring the Kernel via /etc/system.	238
An Example /etc/system File.	238
Debugging a Solaris Configuration.	238
Configuring an IRIX Kernel.	239

NETWORKING

CHAPTER 14 TCP/IP AND ROUTING

Introduction.	243
Networking Road Map.	244
Packets and Segmentation.	246
Packet Addressing.	247
Internet Addresses.	249
ARP 'n' RARP: Address Translation.	251
Routing.	252
Routing protocols.	253
ICMP Redirects.	255
Subnetting.	256
CIDR: Classless Inter-Domain Routing.	257
Selecting a Routing Strategy.	258
Setting Up a Network.	259
Obtaining and Assigning Internet Addresses.	260
if conf ig: Configure Network Interfaces.	262
route: Configure Static Routes.	264

routed: The Standard Routing Daemon	266
gated: A Better Routing Daemon	267
Boot-Time Network Configuration	269
Network Debugging	272
ping: Check if a Host is Alive	273
netstat: Gobs o' Status	274
traceroute: Trace IP Packets	278
tcpdump, etherfind, and snoop: Monitor Traffic	279
arp: Inspect and Manage Address Mappings	281
Other Protocols	282
AppleTalk	282
EtherTalk	283
LocalTalk	283
AppleTalk Addressing	284
AppleTalk Naming	284
IPX	285
NLMs	286
DECnet	286
DECnet Addressing	286
DECnet Routing	286
Recommended Supplemental Reading	287

CHAPTER 15 NETWORK HARDWARE

Introduction	289
Ethernet: The Common LAN	289
Ethernet Hardware	291
Thicknet: 10BASE5	291
Thinnet: 10BASE2	293
10BASE5 and 10BASE2 Termination	294
Unshielded Twisted Pair: 10BASET	294
Fiber: FOIRL and 10BASEF	296
Transceivers	296
Drop Cables	297
Connecting and Expanding Ethernets	298
FDDI: The Disappointing LAN	301
100 Mb/s Twisted Pair: The Frontier LAN	302
ATM: The Promised LAN	302
Frame Relay: The Sacrificial WAN	304
ISDN: The Invisible WAN	305
Network Testing and Debugging	305
Building Wiring	306
UTP Cabling Options	306
Connections to Offices	307
Wiring Standards	307

Network Design Issues	308
Network Architecture vs. Building Architecture	309
Existing Networks	309
Expansion	309
Congestion	310
Maintenance and Documentation	310
Management Issues	310
Recommended Vendors	311
Cables and Connectors	311
Test Equipment	312
Repeaters and Hub Equipment	312
Routers	312
Recommended Supplemental Reading	312

CHAPTER 16 THE DOMAIN NAME SYSTEM

Introduction	314
The History of DNS	314
Who Needs DNS?	315
The DNS Namespace	316
Selecting a Domain Name	317
Registering a Second-Level Domain Name	318
Creating your Own Subdomains	319
Components of BIND	319
named: The BIND Name Server	319
The Resolver Library	320
Shell Interface	321
How DNS Works	321
Caching and Efficiency	323
BIND Client Issues	324
Configuring the Resolver	324
Testing the Resolver	326
Impact on the Rest of the System	326
Setting Up a Name Server	327
/etc/named.boot: The Boot File	327
The DNS Database	331
The SOA Record	333
NS Records	335
A Records	336
PTR Records	337
MX Records	339
CNAME Records	341
HINFO Records	341
WKS Records	341
Bonus Mail Handling Records	342

TXT Records.	342
New Resource Records.	343
BIND Configuration Examples.	344
A Caching-Only Server.	344
The Cache File.	344
A Primary Server for a Small Company.	346
A Primary Server for a Large Site.	347
Loose Ends.	350
Glue Records.	351
Updating Zone Files.	352
Zone Transfers.	353
Security Issues.	353
Testing and Debugging.	354
Log Messages.	354
Debug Levels.	354
Signals Understood by named.	355
Debugging with nslookup and dig.	356
Lame Delegations.	358
Host Management Tools.	359
DNS for Systems not on the Internet.	360
Versions of BIND.	360
Specifics for Various Operating Systems.	361
Recommended Supplemental Reading.	366

CHAPTER 17 THE NETWORK FILE SYSTEM

Introduction.	368
Server-Side NFS.	368
mountd: Respond to Mount Requests.	369
nf sd: Serve Files.	371
Client-Side NFS.	372
bi od: Provide Client-Side Caching.	373
Mounting Remote Filesystems.	373
Administrative Conventions for NFS.	374
Interactions Between NFS and Networks.	375
Dedicated NFS File Servers.	375
Automatic Mounting.	376
automount: Sun's Automounter.	377
Indirect Maps.	377
Direct Maps.	377
Master Maps.	378
Replicated Filesystems using automount.	378
Stopping automount.	379
amd: A Better Automounter.	379
amd Maps.	380

Starting amd	381
Replicated Filesystems using amd	382
Stopping amd	382
Security and NFS	383
Monitoring and Tuning NFS	383
Other File Sharing Systems	384
RFS	384
The Andrew Filesystem	384
Recommended Supplemental Reading	384

CHAPTER 18 SHARING SYSTEM FILES

Introduction	385
What to Share	386
Copying Files Around	387
rdist: Push Files	387
expect: Pull Files	390
NIS: The Network Information Service	392
Magic NIS Cookies	393
Netgroups	394
Advantages and Disadvantages of NIS	395
Technical Overview of NIS	396
Setting Up an NIS Domain	397
NIS+: Son of NIS	400
Other Database Systems	402
Prioritizing Sources of Administrative Information	403
Specifics for Various Operating Systems	403

CHAPTER 19 SLIP AND PPP

Introduction	406
How SLIP and PPP are Different from UUCP	407
Performance Issues	407
SLIP and PPP Compared	407
SLIP	407
PPP	409
Basic Connection Model	409
Making your Host Speak SLIP or PPP	409
Controlling SLIP and PPP Links	410
Finding a Host to Talk to	410
Network Concerns	410
Address Assignment	411
Routing	411
Security	411
NFS	412

X Windows	412
Flavors of SLIP	412
Flavors of PPP	412
Walkthrough: Installing SLIP on SunOS	413
Configuring PPP on Solaris 2.4	418
Installing SLIP and PPP on Other Architectures	419
Dial-In Hubs	419

CHAPTER 20 THE INTERNET

Introduction	420
The Internet Populace	421
Internet Structure and Politics	422
The Internet Hierarchy	422
Acceptable Use	423
Internet History	424
Internet Administration	425
Using the Internet	426
Anonymous ftp	427
Setting Up an Anonymous ftp Server	429
Archive Servers	431
Archie	431
The Wide Area Information Service	433
Gopher	433
The World-Wide Web	435
The Big Picture	435
Connecting to the Internet	436
Recommended Supplemental Reading	438

CHAPTER 21 ELECTRONIC MAIL

Introduction	439
Mail Systems	440
User Agents	441
Transport Agents	442
Delivery Agents	442
Mail Addressing	442
Reading Mail Headers	444
The Spool Directory	447
Mail Philosophy	448
Mail Aliases	449
Special Kinds of Aliases	451
Mail Forwarding	453
The Hashed Alias Database	454
Mailing Lists	455

sendmail: Ringmaster of the Electronic Mail Circus	455
The History of sendmail	456
Vendor-Supplied Versions of sendmail	458
Modes of Operation	459
The Mail Queue	460
Configuring sendmail	462
The Raw Configuration File	463
General Syntax	463
The D Command: Define a Symbol	464
The c Command: Define a Class	466
The F Command: Define a Class from a File	466
The o Command: Set Options	467
The p Command: Define Message Precedence	470
The T Command: Set Trusted Users (not in V8)	471
The H Command: Set Header Format	471
The v Command: Set Configuration File Syntax Version	474
The K Command: Define Keyed Database (V8 Only)	475
Rewriting Rules	476
The s Command: Start a New Ruleset	477
The R Command: Define a Rewriting Rule	479
Examples of Rewriting Rules	483
Common Ruleset Blunders	485
The M Command: Define Mailers	485
Configuration Using the m4 Preprocessor	488
V8 Configuration	489
The define Macro	491
The VERSIONID Macro	492
The OSTYPE Macro	492
The MASQUERADE_AS Macro	492
The FEATURE Macro	494
The MAIL_HUB and SMART_HOST Macros	495
The LOCAL_* Macros	496
The MAILER Macro	496
The SITE and SITECONFIG Macros	497
The DOMAIN Macro	499
Building a V8 Configuration File	499
IDA Configuration	500
IDA Database Files	501
The MAILERTABLE Database	501
The DOMAINTABLE Database	502
The GENERICFROM Database	502
The ALIASES File	503
The ALWAYSADDDOMAIN Macro	503
The PSEUDODOMAINS Macro	503
The PSEUDONYMS Macro	503

The UUCPNODES Macro.	503
The HIDDENNET and HIDDENNETHOST Macros.	504
The LOADAVEQUEUE and LOADAVEREJ Macros.	504
The TIMEOUT Macro.	504
The RELAY_HOST and RELAY_MAILER Macros.	505
The SPOOLDIR Macro.	505
Building an IDA Configuration File.	505
Configuration File Examples.	505
V8 Configuration for a Small Site.	505
IDA Configuration for a Small Site.	506
V8 Configuration for a Larger Site.	506
IDA Configuration for a Larger Site.	508
A Comparison of V8 and IDA.	509
Mailer Statistics.	510
Testing and Debugging.	511
Testing Rewriting Rules.	512
Verbose Delivery.	513
Talking in SMTP.	514
Logging.	514
Security and Privacy.	515
Recommended Supplemental Reading.	517

CHAPTER 22 NETWORK MANAGEMENT

Introduction.	519
Detecting Network Faults.	520
Checking Connectivity with ping	520
Following Up on a Failed Ping.	521
Checking for Errors with netstat	523
Automated Network Testing.	525
Fault Reporting.	526
Planning for Reliability.	526
Network Management Protocols.	529
Yeah, So What?.	529
SNMP: The Simple Network Management Protocol.	530
The SNMP Namespace.	530
Management Information Bases.	531
SNMP Protocol Operations.	532
The SNMP Documentation Swamp.	533
Specifics for Various Operating Systems.	533
The CMU Tools.	537
Recommended Supplemental Reading.	537

CHAPTER 23 SECURITY

Introduction	539
The Seven Common-Sense Rules of Security	540
Security Problems in the <code>/etc/passwd</code> File	542
Password Checking and Selection	542
Group Logins and Shared Logins	543
User Shells	543
Shadow Passwords	543
Password Aging	544
Rootly Entries	544
Setuid Programs	545
Writing Setuid Programs	545
Finding Setuid Programs	546
Important File Permissions	547
Miscellaneous Security Issues	547
Remote Event Logging	548
Secure Terminals	548
<code>/etc/hosts.equiv</code> and <code>~/.rhosts</code>	548
Security and NIS	549
Security and NFS	549
Security and <code>sendmail</code>	549
Security Power Tools	549
COPS: Audit System Security	550
<code>crack</code> : Find Insecure Passwords	550
<code>tcpd</code> : Protect Internet Services	551
<code>tripwire</code> : Monitor Changes to System Files	551
Kerberos: A Unified Approach to Network Security	552
Packet Filtering	554
Security and Backups	556
Trojan Horses	556
Smart Terminal Problems	557
Data Encryption with <code>crypt</code>	557
CERT and SCC	558
Security Mailing Lists	558
Recommended Supplemental Reading	559

BUNCH O¹ STUFF

CHAPTER 24 USENET NEWS

Introduction	563
The Distribution of News	563
Newsgroups	564

alt: The Forbidden Hierarchy.	565
Usenet: Asset or Liability?.	566
FAQs and Archives.	567
Clarinet.	567
Usenet Software.	567
C-News and NNTP.	568
INN.	568
Setting Up News at your Site.	568
Installing INN.	569
Obtaining INN.	569
Printing the INN Installation Documentation.	569
Configuring INN.	570
Compiling INN.	570
The INN Cast of Characters.	571
Starting Up INN.	574
Monitoring Article Flow.	574
Daily Chores.	574
NNTP-Based News Readers.	574
rn: Read News.	575
trn: A Threaded Version of rn.	575
nn: No News is Good News.	575
tin: Yet Another News Reader.	576
xrn: An X Windows News Reader.	576
Maintenance Strategies.	576
News-Reading Chores for System Administrators.	576
news.announce.important (moderated).	577
news.admin.	577
comp.unix.questions.	577
comp.unix.wizards.	577
comp.sources.unix (moderated).	577
comp.sources.misc (moderated).	578
comp.sources.bugs.	578
comp.sources.wanted.	578
comp.sys./nac/i/ne and comp.sys.machine.digest (moderated)	578
comp.unix.admin.	579
Fun Newsgroups You Might Find Interesting.	579
Recommended Supplemental Reading.	579

CHAPTER 25 PRINTING AND IMAGING

Introduction.	580
Mini-Glossary of Printing Terms.	581
BSD Printing.	584
An Overview of the Printing Process.	584
The /etc/printcap File.	585

Printcap Variables.	586
A Sample /etc/printcap Entry.	593
Controlling the Printing Environment.	595
lpq: View the Printing Queue.	595
lprm: Remove Jobs.	596
lpc: Make Administrative Changes.	596
File Size Limits.	598
ATT Printing.	599
Overview.	599
Destinations and Classes.	599
A Brief Description of lp.	600
lpsched and lpshut: Start and Stop Printing.	601
lpadmin: Configure Printing Environment.	602
cancel: Remove Print Jobs.	605
accept and reject: Control Spooling.	605
enable and disable: Control Printing.	606
lpmove: Transfer Jobs.	606
lpstat: Get Status Information.	606
Interface Programs.	607
What to Do When the lp System is Completely Hosed.	608
Cross-Platform Spooling.	609
Spooling to an lpd System from an lpd System.	610
Spooling from HP-UX to an lpd Printer.	611
Spooling from an lpd System to lpsched on HP-UX.	611
Spooling to and from Solaris.	611
The Lesser Evil?.	612
Common Printing Software.	613
TranScript.	613
NeWSPrint.	613
Impressario.	614
JetDirect.	614
grof f.	614
ghostscript.	614
CAP and K-Spool.	614
mpage.	614
Network Printers.	614
PostScript Printers.	615
Printer Philosophy.	616
Use Printer Accounting.	616
Use Banner Pages Only When Necessary.	616
Provide Recycling Bins.	616
Provide Previewers.	616
Buy Cheap Printers.	616
Keep Extra Toner Cartridges on Hand.	617

CHAPTER 26 DISK SPACE MANAGEMENT

Introduction	618
Dealing with Disk Hogs	618
Hog Detection	620
Data Compression	621
Skulker Scripts	622
tunefs: Set Filesystem Parameters	623
Disk Quotas	624
How Quotas Work	625
Enabling Quotas	626
Setting Up Quotas on a Particular Filesystem	627
edquota: Set Quotas	628
quota and repquota: View Quotas	629
Quotas and NFS	629
Disk Overflows	629
Specifics for Various Operating Systems	630

CHAPTER 27 HARDWARE MAINTENANCE

Introduction	631
Board-Handling Lore	632
Static Electricity	632
Reseating Boards	633
Monitor Maintenance	633
Memory SIMMs	633
Preventive Maintenance	634
Maintenance Contracts	634
On-Site Maintenance	635
Board-Swap Maintenance	635
Warranties	635
Environmental Factors	636
Power Supply	636
Temperature	637
Humidity	637

CHAPTER 28 ACCOUNTING

Introduction	638
Why Bother with Accounting?	639
What to Measure and Archive	639
Accounting in a Networked Environment	640
Accounting under BSD	640
CPU Accounting	640
Connect-Time Accounting	643
Printer Usage	645

Dial-Out Usage	646
Summaries	646
Accounting under ATT	646
Setting Up Accounting	647
What Accounting Does	650
Printer Accounting	652
Specifics for Various Operating Systems	652

CHAPTER 29 PERFORMANCE ANALYSIS

Introduction	655
What You Can Do to Improve Performance	656
Factors that Affect Performance	657
Giving your System a Performance Checkup	658
Analyzing CPU Usage	658
The Cost of Virtual Memory	660
Analyzing Memory Usage	662
Analyzing Disk I/O	666
Tuning Filesystems	668
pstat: Print Random Statistics (BSD)	668
Help! My System Just Got Really Slow!	669
Recommended Supplemental Reading	671

CHAPTER 30 UUCP

Introduction	672
UUCP vs. SLIP and PPP	673
An Overview of UUCP	674
UUCP Addresses	674
User-level UUCP	675
uucp: Copy Files	676
uux: Execute Commands on Other Systems	677
UUCP Data Transport	677
Setting Up UUCP	678
Identifying your UUCP Software	679
Verifying your Software Configuration	680
Connecting Modems	681
Describing your Modems to UUCP	681
Entering Telephone Prefix Codes	684
Preparing an Access Control Specification	685
BSD Security: USERFILE and L.cmds	686
Format of the USERFILE	687
Format of the L.cmds File	688
HoneyDanBer Security: Permissions	689
Finding a UUCP Neighbor	691

Making a Login for a New Neighbor.	692
Making an L.sys or Systems Entry for a Neighbor.	693
Debugging the Connection.	697
Configuring your Mail System to Use UUCP.	698
Setting Up Automatic Calling using cron.	699
The UUCP Log Files.	701
LOGFILE and .Log.	701
SYSLOG and .Admin/xferstats.	702
ERRLOG and .Admin/errors.	702
Miscellaneous UUCP Support Programs and Files.	702
uuclean: Sanitize the Spool Directory.	702
uuq and uustat: Monitor the UUCP Queue.	703
uusnap: Show Status of Connections.	703
uuname: Show UUCP Neighbors.	703
uupoll: Force a Call to a UUCP Neighbor.	703
uulog: The Command of a Thousand Faces.	703
Specifics for Various Operating Systems.	704
Recommended Supplemental Reading.	704

CHAPTER 31 DAEMONS

Introduction.	705
Essential Daemons.	706
init: The Primordial Process.	706
cron: Schedule Commands.	708
inetd: Manage Daemons.	708
Configuring inetd.	708
The services File.	709
Restarting inetd.	710
portmap: Map RPC Services to TCP and UDP Ports.	710
The BSD Daemons.	711
pagedaemon: The Paging Daemon.	711
swapper: The Swapping Daemon.	711
update: Synchronize Filesystems.	712
lpd: Manage BSD Printing.	712
sendmail: Transport Electronic Mail.	712
ATT Daemons.	712
lpsched: Manage ATT Printing.	712
Random Daemons.	712
snmpd: Network Management Server.	713
rpldaemon: Print from BSD to HP-UX.	713
glbd and llbd: Location Brokers.	713
NFS Daemons.	713
nfsd: Serve Files.	713
rpc.mountd: Respond to Mount Requests.	713

rpc.lockd and rpc.statd: Manage NFS Locks.	713
biod: Cache Blocks.	714
NIS Daemons.	714
ypbind: Locate NIS Servers.	714
ypserv: NIS Server.	714
ypxfrd: Transfer NIS Databases.	714
rpc.nisd: NIS+ Server.	715
Internet Daemons.	715
comsat: Notify Users of New Mail.	715
talkd: talk Server.	715
rwhod: Maintain Remote User List.	715
ftpd: File Transfer Server.	716
popper: Mailbox Server.	716
rlogind: Remote Login Server.	716
telnetd: Yet Another Remote Login Server.	716
rshd: Remote Command Execution Server.	716
rexecd: Yet Another Command Execution Server.	716
rpc.rexd: Yet a Third Command Execution Server.	717
timed: Synchronize Clocks.	717
xntpd: Synchronize Clocks Even Better.	717
routed: Maintain Routing Tables.	717
gated: Maintain Complicated Routing Tables.	718
named: DNS Server.	718
nntpd: Transfer Usenet News.	718
inn and nnrpd: Alternate NNTP Daemons.	718
syslogd: Process Log Messages.	719
fingerd: Look Up Users.	719
httpd: World-Wide Web Server.	719
Daemons for Diskless Clients.	719
bootpd: Boot Server.	720
tftpd: Trivial File Transfer Server.	720
rarpd: Map Ethernet Addresses to IP Addresses.	721
bootparamd: Advanced Diskless Life Support.	721

CHAPTER 32 POLICY AND POLITICS

Introduction.	722
Policy and Procedure.	723
Security Policies.	724
User Policy Agreements.	725
Administrator Policy Agreements.	725
Policy and Procedures for Emergency Situations.	726
Legal Issues.	727
Some Interesting Factoids.	728
Scope of Service.	728

Trouble Reporting Systems	729
Financing Models	730
Managing Management	731
Hiring, Firing, and Training	732
Attitude Adjustment	733
Operator Wars	734
Iterative Refinement	734
War Stories and Ethics	735
Boss's Mistake #1	735
Boss's Mistake #2	735
Who to Fire	736
Horndog Joe	736
Electric Fence	737
Wedding Invitations	738
Pornographic GIF Images	738
Migrating Data	739
Bill Must Die!	740
Local Documentation	741
Procurement	742
Decommissioning Hardware	743
Management of Dumps and Data	744
Software Patents	745
Organizations and Conferences	746
Mailing Lists	748
Standards	748
Sample Documents	749
ABOUT THE CD-ROM	751
COLOPHON	757
INDEX	759
