Part I Overview

Chapter 0

Preface

0.1. What We're About	3
0.2. Contents Overview	4
0.3. Audience	6
0.4. How to Read the Book	6
0.5. Notation and Terminology	7
0.6. Acknowledgments	11

Chapter 1

Value-at-Risk

1.1. History	13
Regulatory VaR Measures	13
Proprietary VaR Measures	14
Portfolio Theory	15
Emergence of Risk Management	16
RiskMetrics	18
Publicized Losses	19
1.2. Measures	20
Exercises	20
1.3. Risk Measures	20
1.4. Market Risk	21
Exercises	22

1.5. Value-at-Risk	22	
Exercises	24	
1.6. Risk Limits	25	
Market Risk Limits	26	
Stop-Loss Limits	27	
Exposure Limits	27	
VaR Limits	28	
Comparison	29	
1.7. Examples	29	
Example: The Leavens VaR Measure	30	
Example: Industrial Metals	31	
Example: Australian Equities	34	
Exercises	39	
1.8. VaR Measures	41	
Risk Factors	41	
Holdings	43	
Mappings	43	
Inference	44	
Transformations	45	
Remappings	47	
Summary	48	
Exercises	50	
1.9. Further Reading	51	

Part II

Essential Mathematics

Chapter 2

Mathematical Preliminaries

2.1. Motivation	55	
2.2. Notation and Terminology	57	
Cartesian Products	57	
Vectors	58	
Matrices	58	
Functions	59	
Polynomials	60	
2.3. Gradient and Gradient-Hessian Approximations	61	
Univariate Approximations	61	
Multivariate Approximations	62	

Taylor Polynomials	63	
Exercises	64	
2.4. Ordinary Interpolation		64
Methodology	66	
Exercises	67	
2.5. Complex Numbers		68
The Number i	68	
Complex Operations	69	
Complex Functions	70	
Exercises	70	
2.6. Eigenvalues and Eigenvectors		70
Intuitive Example	72	
Exercises	73	
2.7. Cholesky Factorization		73
Positive Definite Matrices	73	
Matrix "Square Roots"	74	
Cholesky Factorization	74	
Computational Issues	76	
Exercises	77	
2.8. Minimizing a Quadratic Polynomial		77
Exercises	78	
2.9. Ordinary Least Squares		79
Ordinary Least Squares	80	
Exercises	83	
2.10. Cubic Spline Interpolation		83
Exercises	86	
2.11. Finite Difference Approximations of Derivatives		86
Exercises	87	
2.12. Newton's Method		87
Univariate Newton's Method	87	
Caveats	89	
Secant Method	89	
Multivariate Newton's Method	90	
Line Searches	91	
Exercises	93	
2.13. Change of Variables Formula		94
Exercises	96	
2.14. Numerical Integration in One Dimension		96
Riemann Sums	97	
Trapezoidal Rule	98	
Simpson's Rule	100	
Exercises	101	

2.15. Numerical Integration in Multiple Dimensions	102
Quadrature	102
The Product Rule	103
Curse of Dimensionality	104
Exercises	105
2.16. Further Reading	105

Chapter 3

Probability

3.1. Motivation	107
3.2. Prerequisites	108
3.3. Parameters	108
Expectation	109
Expectation of a Function of a Random Variable	109
Variance and Standard Deviation	110
Skewness	110
Kurtosis	111
Quantiles	111
Moments	112
Exercises	112
3.4. Parameters of Random Vectors	114
Expectation of a Function of a Random Vector	114
Joint Moments	114
Co variance	115
Correlation	115
Exercises	116
3.5. Linear Polynomials of Random Vectors	116
Vector Linear Polynomials	116
Exercises	117
3.6. Properties of Covariance Matrices	117
Singular Random Vectors	118
Multicollinear Random Vectors	120
Exercises	122
3.7. Principal Component Analysis	123
Principal Components	128
Choice of Weights	129
Exercises	130
3.8. Uniform and Related Distributions	131
Uniform Distribution	131
Multivariate Uniform Distribution	132
Exercises	132

3.9. Normal and Related Distributions	133
Normal Distributions	133
Lognormal Distributions	135
Chi-Squared Distributions	136
Joint-Normal Distributions	138
Exercises	140
3.10. Mixtures of Distributions	141
Parameters of Mixed Distributions	141
Mixed-Normal Distributions	142
Mixed Joint-Normal Distributions	143
Exercises	143
3.11. Moment-Generating Functions	144
Exercises	145
3.12. Quadratic Polynomials of Joint-Normal Random Vectors	145
Simplified Representation	145
Moments	148
Other Parameters	150
Exercises	151
3.13. The Cornish-Fisher Expansion	151
Exercises	153
3.14. Central Limit Theorem	153
Exercises	155
3.15. The Inversion Theorem	156
Imaginary Random Variables	156
Characteristic Functions	157
Inversion Theorem	157
Exercises	158
3.16. Quantiles of Quadratic Polynomials of Joint-Normal Random Vectors	158
The CDF of a Quadratic Polynomial of a Joint-Normal Random Vector	158
Quantiles of a Quadratic Polynomial of a Joint-Normal Random Vector	160
Exercises	161
3.17. Further Reading	161

Chapter 4

Statistics and Time Series Analysis

4.1. Motivation	163
4.2. From Probability to Statistics	163

4.3. Estimation	165	
Samples	165	
Estimators	166	
Sample Estimators	167	
Bias	167	
Standard Error	168	
Mean Squared Error	168	
Random Vectors	169	
Exercises	169	
4.4. Maximum Likelihood Estimators	171	
ML Estimators	171	
ML Estimates of Scalar Parameters	172	
ML Estimates of Non-Scalar Parameters	172	
Exercises	174	
4.5. Stochastic Processes	174	
Conditional Versus Unconditional Distributions	175	
Correlations	177	
Stationarity	177	
Differencing	178	
Returns	178	
Heteroskedasticity	179	
Exercises	180	
4.6. White Noise, Autoregressive, and Moving-Average Processes	181	
White Noise	181	
Moving-Average Processes	182	
Autoregressive Processes	183	
Autoregressive Moving-Average Processes	183	
Properties	184	
Estimation	184	
Exercises	186	
4.7. GARCH Processes	187	
CCC-GARCH	188	
Orthogonal GARCH	189	
Properties	189	
4.8. Regime-Switching Processes	190	
Properties	191	
4.9. Further Reading	191	

Chapter 5

Monte Carlo Method

5.1. Motivation	193
------------------------	------------

- 5.2. The Monte Carlo Method** **194**
 - Stanislaw Ulam 194
- 5.3. Realizations of Samples** **199**
 - Exercises 200
- 5.4. Pseudorandom Numbers** **201**
 - Linear Congruential Generators 201
 - Multiple-Recursive Generators 204
 - Inversive Generators 205
- 5.5. Testing Pseudorandom Number Generators** **207**
 - The Spectral Test 207
 - Discrepancy 208
 - Period 209
- 5.6. Implementing Pseudorandom Number Generators** **209**
 - The Number 0 209
 - Integer Calculations 210
 - Implementation Verification 211
 - Choosing a Generator 211
- 5.7. Breaking the Curse of Dimensionality** **211**
 - Crude Monte Carlo Estimator 212
 - Implications of Standard Error 213
 - Exercises 214
- 5.8. Pseudorandom Variates** **215**
 - Inverse Transform Method 215
 - Joint-Normal Pseudorandom Vectors 216
 - Generalizing the Crude Monte Carlo Estimator 216
 - Exercises 218
- 5.9. Variance Reduction** **218**
 - Control Variates 218
 - Control Variates Generalized 222
 - Stratified Sampling 223
 - Exercises 224
- 5.10. Further Reading** **225**

Part III

Value-at-Risk

Chapter 6

Market Data

- 6.1. Motivation** **229**
- 6.2. Forms of Data** **229**

Types of Prices	230	
Collecting Data	231	
Data Sources	232	
6.3. Nonsynchronous Data	233	
Impact of Nonsynchronous Data		234
6.4. Data Errors	237	
Errors	237	
Data Filtering	238	
Data Cleaning	238	
6.5. Data Biases	239	
6.6. Futures	241	
Nearbys	242	
Nearbys and Distortions		243
Constant-Maturity Futures Prices		246
Exercises	246	
6.7. Implied Volatilities	248	
Expirations	250	
Strikes	250	
6.8. Further Reading	251	

Chapter 7

Inference

7.1. Motivation	253	
7.2. Selecting Key Factors	254	
Data Availability	255	
Stationarity and Homoskedasticity		255
Structural Relationships	256	
Consistency over Time	257	
7.3. Current Practice	257	
Choice of Distribution	258	
Conditional Mean Vectors	258	
White Noise	259	
Uniformly Weighted Moving Average Estimates		260
Assumptions	262	
Exponentially Weighted Moving Average Estimates		264
Covariance Matrices That Are Not Positive Definite		265
Exercises	265	
7.4. Unconditional Leptokurtosis and Conditional Heteroskedasticity	266	
An Experiment	268	

Modeling Unconditional Leptokurtosis	269
Implications for VaR Measures	270
Exercises	270
7.5. Historical Realizations	270
Mirror Values	273
Issues	274
7.6. Further Reading	274

Chapter 8

Primary Mappings

8.1. Motivation	275
8.2. Daycounts	276
Actual Days, Calendar Days, and Trading Days	277
Time Versus Maturity	278
Value Dates	278
Exercises	284
8.3. Primary Mappings	285
Specifying ${}^I S$ and $(O$	285
Specifying ${}^I R$ and 0	286
Practical Examples	291
Exercises	291
8.4. Example: Equities	292
Exercises	294
8.5. Example: Forwards	295
8.6. Example: Options	304
8.7. Example: Physical Commodities	307
8.8. Further Reading	314

Chapter 9

Remappings

9.1. Motivation	315
Facilitating Transformations	315
Facilitating Inference	316
Facilitating Another Remapping	316
Types of Remappings	316
9.2. Holdings Remappings	317
Designing Holdings Remappings	324
Exercises	325

- 9.3. Global Remappings 327**
 - Selecting a Polynomial Form 328
 - Linear Remappings 329
 - Linear Remappings with Gradient Approximations 330
 - Quadratic Remappings 332
 - Quadratic Remappings with Gradient-Hessian Approximations 333
 - Interpolation and the Method of Least Squares 334
 - Selecting Realizations for Interpolation or Least Squares 334
 - Exercises 340
- 9.4. Change-of-Variables Remappings 341**
 - Modeling Curves 344
 - Exercises 347
- 9.5. Principal-Component Remappings 348**
 - Exercises 353
- 9.6. Further Reading 354**

Chapter 10

Transformations

- 10.1. Motivation 355**
- 10.2. Linear Transformation Procedures 357**
 - Exercises 358
- 10.3. Quadratic Transformation Procedures 359**
 - Exercises 364
- 10.4. Monte Carlo Transformation Procedures 367**
 - Monte Carlo Standard Error 368
 - Exercises 370
- 10.5. Variance Reduction 370**
 - Control Variates 371
 - Stratified Sampling for Standard Deviation VaR Metrics 375
 - Stratified Sampling for Quantile VaR Metrics 377
 - Selective Valuation of Realizations 380
 - Exercises 382
- 10.6. Further Reading 383**

Appendix: Standard Normal Table 385
