Anchor technology and design

1. Base materials	3
1.1 Concrete	3
1.2 Masonry	4
1.3 Other base materials	5
1.4 Why does an anchor hold in base material?	6
1.4.1 Failure modes	7
1.4.1.1 Effect of static loading	7
1.4.1.2 Influence of cracks	8
2. Corrosion	10
3. Dynamic loading	13
4. Resistance to fire	15
5. Approvals	19
6. Anchor design	23
6.1 Safety concept	23
6.2 Design methods	24
6.2.1 New design method	25
6.2.2 Traditional Hilti design method	28

Mechanical anchoring systems

Heavy duty anchors

HDA-T/-TR/-TF/-P/-PR/-PF design anchor	31
HSL/-G/-B/-G-R heavy duty anchor	41
HSL-TZ/-G-TZ/-B-TZ heavy duty anchor	49

Medium duty anchors

HSC-A(R)/I(R) safety anchor	54
HST/-R/-HCR stud anchor	61
HSA/HSA-R/HSA-F stud anchor	70
HLC sleeve anchor	81
HKD-S/-SR flush anchor	83

Light duty anchors

HUD-1 universal anchor	87
HUD-L universal anchor	90
HGN gas concrete anchor	93
HLD light duty anchor	96
HRD-U/-S/frame anchor	98
HPS-1 impact anchor	102
HUS screw anchor	105
HH-D-S cavity anchor	109
HH-D cavity anchor	113
DBZ wedge anchor	115
HA 8 ring/hook anchor	117
HSP/HFP drywall plug	119

Light duty anchors (Insulation fasteners)

IDP insulation fastener	121
IZ expandable insulation fastener	123
IN insulation fastener	125
IDMS/IDMR metal insulation fastener	127

Adhesive anchoring systems

Heavy duty anchors

HVZ adhesive anchor	131
HVU with HAS/R/-HCR/-E/-E-R adhesive anchor	141
HVU with HIS-N/-RN adhesive anchor	150
HVU with rebar adhesive anchor	159
HIT-RE 500 with HAS/R/-HCR/-E/-E-R adhesive anchor	166
HIT-RE 500 with HIS-N/-RN adhesive anchor	176
HIT-RE 500 with rebar adhesive anchor	186

Medium duty anchors

HIT-HY 150 with HAS injection adhesive anchor	195
HIT-HY 150 with HIS-N/-RN injection adhesive anchor	204
HIT-HY 150 with rebar injection adhesive anchor	213
HVA-UW with HAS/R/-HCR adhesive anchor	221
HVA-UW with HIS-RN adhesive anchor	223

Light duty anchors

HIT-HY 50 with HIT-AN/-IG	224
HIT-HY 20 with HIT-AN/-IG	228

Special anchors

HRA, HRC, HRT rail anchor	231
HWB cladding anchor	238

Combined loading design	241
-------------------------------	-----

Examples

9.1 Example 1	243
9.2 Example 2	247

Appendix 1

10.1 Rebar fastening application	253
10.1.1 Post-fix system advantages	253
10.1.2 Application examples	253
10.2 Product Information Hilti HIT-HY150 Rebar	256
10.2.1 The injection system	256
10.2.2 Adhesive bond	256
10.2.3 Installation	257
10.3 Rebar Fastening Design Concept	259
10.3.1 Scope	259
10.3.2 Symbols	260
10.3.3 Fastening design	263
10.3.3.1 Limit to rebar utilisation	263
10.3.3.2 Limit to adhesive bond utilisation	263

10.3.3.3	Limit to concrete bond utilisation.....	264
10.3.3.4	Basic anchorage length	265
10.3.4	Detailing provisions	267
10.3.4.1	Minimum anchorage length.....	267
10.3.4.2	Splice length	267
10.3.4.3	Distance between cast-in rebars and new rebars.....	268
10.3.4.4	Poor Bond Conditions	269
10.3.4.5	Limit state of cracking	269
10.3.4.6	Green concrete	270
10.3.5	Transmissible forces	271
10.3.5.1	Level of design value	271
10.3.5.2	Level of recommended load.....	271
10.4	Examples of applications.....	272
10.4.1	Wall connection.....	272
10.4.2	Wall extension.....	273
10.4.3	Installation of an intermediate floor	274
10.4.4	Installation of steps between landings	276
10.4.5	Connection of a balcony	277
10.5	Test reports, Supplementary information.....	278
10.5.1	Relevant reports.....	278
10.5.2	Test results: Pull-out tests on rebars.....	278
10.5.3	Test results: Full scale beam test.....	280

Appendix 2

11.1	Concrete overlay connection	283
11.1.1	Application range	283
11.1.2	Advantages of the method	283
11.2	Design of interface.....	285
11.2.1	Basic considerations	285
11.2.2	Ultimate limit state for shear transfer at the interface.....	285
11.2.2.1	Principle and set-up of the model	285
11.2.2.2	Design shear resistance at interface, V_{FtI}	286
11.2.2.3	Design shear strength at interface, τ_{FtI}	286
11.2.3	Design shear force acting longitudinally at interface, V_{Sd}	290
11.2.3.1	Augmentation of compression zone.....	290
11.2.3.2	Augmentation of tension zone	290
11.2.3.3	Shear force to be transferred at overlay perimeter	290
11.2.3.4	Regions without connectors.....	291
11.2.4	Serviceability limit state.....	291
11.2.5	Additional rules and detailing provisions	291
11.2.5.1	Mixed surface treatments.....	291
11.2.5.2	Minimum amount of reinforcement at the interface.....	291
11.2.5.3	Layout of connectors.....	292

11.2.5.4	Anchorage of connectors in the old and the new concrete	292
11.2.5.5	Minimum reinforcement in overlay	293
11.2.5.6	Recommendation for overlay placement	293
11.2.5.7	Recommendation for surface treatment specification	293
11.3	Examples	294
11.3.1	Example: Double-span slab	294
11.3.2	Example: Double-span beam with new slab	297
11.3.3	Example: Foundation reinforcement	298
11.4	Test results	298
11.4.1	Transfer of shear across a concrete crack	298
11.4.2	Laboratory tests by Hilti Corporate Research	298
11.4.3	Working principle of connectors	300
11.4.4	Comparison with international test results	301
11.5	Notations	302
11.6	Reference literature	303
