

Forest biodiversity indicators in the Nordic countries

Status based on national forest inventories

Contents

Contents	5
Summary	7
Sammendrag	10
Tiivistelmä	13
1. Introduction	17
1.1 A brief forest history	17
1.2 The UN Convention on biological diversity	17
1.3 Pan-European indicators for sustainable forest management	17
1.4 Indicators for assessing biodiversity of forest ecosystems	18
1.5 Indicators of environmental quality	19
2. Forest biodiversity in the nordic region	21
2.1 Climate, topography and soils	22
2.2 Ecosystem diversity	24
2.3 Species diversity	26
2.4 Genetic diversity	28
3. Biodiversity indicators - material and methods	31
3.1 The national forest inventories	31
3.2 Development and harmonisation of indicators	32
3.3 Harmonisation terminology	33
3.4 Basic concepts	33
3.5 Result presentation	34
4. Forest area and land cover	35
4.1 Land cover	35
4.2 Important properties without indicators	36
5. Resource management	37
5.1 Growing stock	37
5.2 Balance between increment and fellings	39
6. Forestry methods and land use	43
6.1 Ditching of swamp forest and mires	43
6.2 Felling systems	45
6.3 Regeneration methods	46
6.4 Soil scarification	47
6.5 Road network density	48
6.6 Introduced tree species	49
7. Forest dynamics	53
7.1 Area with forest fire	53
7.2 Browsing damage	54
7.3 Important properties without indicators	55
8. Forest state	57
8.1 Tree species composition	57
8.2 Forest age	64
8.3 Dimension of living trees	69
8.4 Important substrates	73
8.5 Tree mortality and dead wood	77
8.6 Landscape patterns	81
9. Species diversity and threatened species	83
9.1 Species diversity	83
9.2 Red-listed species	85
9.3 Important properties without indicators	86
10. Conservation measures	87
10.1 Strictly protected forest	87
10.2 Other protected land	89
10.3 Important properties without indicators	90
11. Scenarios for biodiversity indicators	91
11.1 Introduction	91
11.2 Assumptions	91
11.3 Results	92
12. Discussion of the indicators	95
12.1 Comparison with the MCPFE indicators	95
12.2 Comparison with the BEAR indicators	97
12.3 Biodiversity indicators in a DPSIR framework	99
12.4 Evaluation of NFI as indicator basis	101
13. Need for further research and development	103
13.1 Sampling methods	103
13.2 Indicator development	104
13.3 Biological validation of indicators	104
