

PROTECTIVE COATINGS for Metals

by

R. M. BURNS

*Formerly Director of
Chemical and Metallurgical Research
Bell Telephone Laboratories, Inc.*

and

W. W. BRADLEY

*Member of the Technical Staff
Bell Telephone Laboratories, Inc.*

SECOND EDITION

REINHOLD PUBLISHING CORPORATION

Publishers of Chemical Engineering Catalog, Chemical Materials Catalog, Materials & Methods, Automatic Control, Progressive Architecture, and Advertising Management of American Chemical Society

430 Park Avenue, New York

Contents

	PAGE
FOREWORD. BY HERBERT H. UHLIG.	v
CHAPTER 1. PRINCIPLES OF CORROSION AND CORROSION CONTROL	1
CHAPTER 2. SURFACE PREPARATION FOR COATINGS.	22
<i>Degreasing: Caustic Soda, Soda Ash, Phosphates, Alkali Silicates, Soap and Synthetic Detergents. Descaling. Polishing. Evaluation of Cleanliness of Metal Surfaces.</i>	
CHAPTER 3. TYPES OF METALLIC COATINGS AND METHODS OF APPLICATION.	40
<i>Historical. Immersion in Molten Metal—"Hot Dipping": Principles, General Nature of Hot-Dipped Coatings, Practical Aspects of Hot-Dipping Process, Extension of Hot-Dipping Process. Cementation: Mechanism of Process, Character of the Coating, Practical Applications, Cemented or Sintered Carbide Coatings. Metal Cladding. Electroplating: Principles, Character of Deposit. Vapor Deposition of Metallic Coatings: Coatings by Thermal Decomposition of Compounds, Coatings by Cathode Sputtering, Equipment and Methods of Operation, Coatings by Evaporation of Molten Metals.</i>	
CHAPTER 4. SPRAYED METAL COATINGS.	66
<i>Historical. Equipment and Methods of Metal Spraying: Surface Preparation, The Nature of Sprayed Metal Coatings. Performance of Metal Spray Coatings: Life Expectancy of Sprayed Metal Coatings, Cost of Sprayed Metal Coatings.</i>	
CHAPTER 5. PRODUCTION AND PROPERTIES OF ZINC COATINGS.	82
<i>History of Zinc Coating Processes. Outline of Hot-Dipping Process: Surface Preparation, Galvanizing Process, Dross Formation, Thickness Control, Effect of Metallic Additions to Zinc Bath, Other Factors Which Affect Character of Zinc Coatings, The Microstructure of Iron-Zinc Alloys, Effect of Hot-Dipping Process on the Base Metal, Surface Appearance of Zinc-Coated Sheets After Storage. Electroplating: Plating Baths, Anodes, Plating Tanks and Mechanical Equipment, Nature of Coating. Zinc Coating by Cementation—"Sherardization": Outline of Process, Effect of Temperature, Structure of Coating, Mechanism of Zinc Cementation Process.</i>	

	PAGE
CHAPTER 6. PROTECTIVE VALUE OF ZINC COATINGS.	112
<i>Nature of Protective Action of Zinc Coatings. Distinctive Properties of Various Types of Zinc Coatings. Performance of Zinc Coatings in the Atmosphere: Effect of Environment, Effect of Impurities upon Corrosion of Zinc Coatings in the Atmosphere. Performance of Zinc Coatings Indoors. Protective Value of Zinc Coatings in Aqueous Environments: Natural Waters, Performance of Zinc Coatings in Sea Water and Chloride Solutions, Corrosion of Zinc Coatings in Acids and Alkalies. Performance of Zinc Coatings in Soils. Protective Value of Zinc Coatings Against Corrosion Fatigue of Steels. Toxic Properties of Zinc.</i>	
CHAPTER 7. CADMIUM COATINGS AND TUEU PROTECTIVE VALUE	148
<i>Method of Application of Cadmium Coatings. Protective Value of Cadmium Coatings.</i>	
CHAPTER 8. TIN COATINGS.	156
<i>Historical. Preparation of Basis Metal. Electroplated Tin Coatings: Alkaline Tin Baths, Acid Baths, Immersion Tinning. Hot-Dipped Tin Coatings: Tinning of Copper. Tin-Plate Commercial Terms. The Use of Tin Plate in the Canning Industry. Nature of Tin Coatings: Structure of Tin Coatings, Common Defects in Tin Coatings. Corrosion Resistance of Tin Coatings: Performance in the Atmosphere, Performance in Aqueous Solutions, Performance as Containers.</i>	
CHAPTER 9. NICKEL AND CHROMIUM COATINGS.	190
I. NICKEL. <i>Electrodeposition: Historical, Operation, Plating Solutions, Nature of the Deposit, Plating on Aluminum and Zinc. Plating by Immersion: Displacement Method, Electroless Method. Cladding. Corrosion Resistance: Corrosion Resistance of Nickel, Porosity of Electroplated Nickel, Corrosion Resistance of Electroplated Nickel.</i>	
II. CHECMIUM. <i>Electrodeposition: Historical, Theory and Practice of Chromium Plating. Chromium Cementation—"Chromizing". The Performance of Chromium Coatings.</i>	
CHAPTER 10. COATINGS OF COPPcR, LEAD, ALUMINUM, MISCELLANEOUS METALS AND ALLOYS.	235
<i>Copper Coatings: Electroplated Copper Coatings, Structure of Electroplated Copper Coatings, Adhesion of Electroplated Copper Coatings, Use of Electroplated Copper in Selective Carburization of Steel, Mechanical Copper-Coating Process, Corrosion Resistance of Copper Coatings. Lead Coatings: The Hot-Dipping Process, Lead Linings, Terne Plate, Electroplated Lead Coatings, Corrosion Resistance of Lead Coatings. Aluminum Coatings: Colorizing, Hot-Dipped Aluminum Coatings, Clad Aluminum Products, Electroplated Aluminum Coatings, Cast Aluminum Coatings, Corrosion Resistance of Aluminum Coatings. Electroplated Alloy Coatings: Brass, Tin-Copper Alloys, Tin-Zinc, Tin-Nickel, Nickel-Zinc, Lead-Tin, Nickel-Cobalt. Miscellaneous Metallic Coatings: Cobalt Coatings, Tungsten Coatings, Tantalum Coatings, Antimony Coatings.</i>	
CHAPTER 11. COATINGS OF NOBLE AND RARE METALS.	275
<i>Historical. Silver Coatings: Thickness of Silver Plate, Tarnishing of Silver, Silver Migration. Gold Coatings. Rhodium Coatings. Platinum and Palladium Coatings. Indium Coatings. Rhenium Coatings.</i>	

CHAPTER. IS. METHODS OF TESTING METALLIC COATINGS—287

Determination of Quality of Metallic Coatings: Physical Tests, Bend Test for Sheets and Wire, Adhesion Tests. Tests for Thickness: Sampling, Hydrochloric-Antimony Chloride Method, Other Chemical Stripping Methods, Electrolytic Methods, Magnetic Methods, Radiation Backscattering, Anodic Solution, Electronic Thickness Gage, Metallographic Examination. Tests for Uniformity of Coating: Preece Test, Chromic Acid Spot Test for Zinc, Dropping Tests, Spot Test for Chromium, B.N.F. Jet Test. Tests for Porosity: Ferroxyd, Hot Water, Other, Electrographic, Intrinsic Porosity. Use of Statistical Methods. Determination of Rate of Corrosion: Atmospheric Corrosion Testing, ASTM Exposure Testing, Corrosion Testing in Liquids, Soil Corrosion Testing. Accelerated Corrosion Testing: Salt Spray, Humidity, Total Immersion, Alternate Immersion. Study of Corrosion Reactions: Electrochemical Techniques.

CHAPTER 14. ORGANIC COATINGS. CHEMISTRY AND COMPOSITION 350

Historical. Classification: Paints, Enamels, Lacquers. Chemistry of Organic Coatings: functionality, Autoxidative, Condensation and Addition Polymerization, Film Formation. Drying Oils: Linseed, Soybean, Tung, Castor, Perilla, Oiticica, Tall, Fish, Minor, Improved. Paint Driers. Resins: Natural, Fossil, Recent. Synthetic Resins: Alkyd, Phenolic, Rosin Esters, Maleic, Amine, Vinyl, Cellulosic, Silicones, Epoxy, Miscellaneous. Bitumens: Asphalt, Coal Tar Pitch, Bituminous Lacquers, Enamels and Emulsions. Pigments and Pigmentation.

CHAPTER 14. ORGANIC COATINGS. PERFORMANCE AND EVALUATION 399

General Considerations, Electrochemical Aspects. Pigments Used in Corrosion Protection: Red Lead, White and Other Lead Pigments, Zinc Chromate, Barium-Potassium, Chromates, Iron Oxide, Zinc Oxide, Zinc Dust, Aluminum Powder, Carbon, Other Metallic, Mica, Primer Pigment Combinations. "Wash" Primer System. Evaluation of priming Pigments. Factors That Influence Adhesion: Initial Adhesion, Physical and Chemical State of Metal Surface, Surface Contaminants, Influence of Pretreatments on Paint Adhesion to Zinc, Copper and, Brass, Aluminum, Magnesium. Blistering of Paint Films. Permeability. Structural Properties of Coatings: Varnishes, Bituminous Materials, Examination of Structure. Evaluation of Protective Quality: Exposure Testing, Effect of Atmospheric Variables, Method of Exposure Testing, Results of Atmospheric Exposure Tests, Results of Sea Water Tests, Accelerated Exposure Tests, Evaluation by Physical Tests. Use of Physical Tests in Quality Control.

CHAPTER 15. APPLICATION AND USE OF PROTECTIVE ORGANIC COATINGS. 499

Painting of Outdoor Steel: Surface Preparation, Practice and Cost of Painting Structural Steel, Painting Practices in Petroleum Refineries. Finishing of Industrial Products: Telephone Apparatus, Automobiles, Household Appliances. Painting of Hot Surfaces. Finishing of Aluminum and Magnesium. Die Cast Alloys. Protection of Underground Pipe: Cathodic Protection, Character of Soils, Selection and Performance of Coatings, Methods of Application, Cost of Pipe Line Coating. Summary of Paint Materials and Uses.

	PAGE
CHAPTER 16. CHEMICAL CONVERSION AND ANODIZED COATINGS.	544
<i>Phosphating. Chromate Coatings. Treatments for Aluminum: Anodic Coatings, Nature of Anodic Films on Aluminum, Chemical Coatings on Aluminum. Treatments for Magnesium: Chromate Treatments, New Electrolytic Treatments for Magnesium. Chemical Oxide Coatings.</i>	
CHAPTER 17. SPECIAL-PURPOSE COATINGS.	574
<i>Coatings for Temporary Protection: Rust Preventive Compounds, Strip-pable Coatings. Lining Materials. Vitreous Coatings: Porcelain or Vitreous Enamels, Ceramic Coatings.</i>	
CHAPTER 18. CORROSION INHIBITORS.	596
<i>Domestic Water Supplies. Recirculating Water Systems: Air Conditioning Equipment. Steam Condensate Lines. Salt Brines. Inhibitors for Acid Pickling. Inhibitors in Petroleum and Natural Gas Industries. Vapor Phase Inhibitors.</i>
