Table of contents

02	Foreword
03	Preamble
04	Background: Climate change, natural hazards and adaptation in the Alps
04	The climate is changing – particularly in the Alps
05	Expected impacts on natural hazards
06	Consequences for risk management
07	From awareness to action: Adaptation strategies in the alpine countries
08	Goals for risk management in the Alps under changing climatic conditions
09	Recommendations for integrated climate-proof risk management and good practice examples
09	Prepare for emergency intervention
10	Review the climate change fitness of existing structural protection measures
11	Set up and optimise long-term monitoring and warning
13	Anticipate and cope with new risks
14	Adapt hazard and risk mapping to a changing climate
15	Enhance coordination between spatial planning and risk management
16	Establish a risk culture and introduce risk dialogue
17	Strengthen individual preparedness and precaution
18	Improve the knowledge base and transfer to practice
19	Maintain and improve the functionality of protection forests
20	Annex: Climate change scenarios used for national and regional adaptation strategies and adaptation work
	Glossary
	Literature
	Adaptation strategies and action plans
