

Climate change, impacts and vulnerability in Europe 2012

An indicator-based report

Contents

Acknowledgements	11
Executive summary	15
Technical summary	19
1 Introduction	30
1.1 Purpose and outline	30
1.2 Scope and link to other EU and EEA activities and products	32
1.3 Background and policy framework	33
1.4 Climate change, impact, vulnerability and adaptation indicators	35
1.5 Emissions and socio-economic scenarios for projections	38
1.6 Uncertainty in observations and projections	42
1.7 Definition of vulnerability and risk	45
2 Changes in the climate system	49
2.1 Human influence on the climate system	49
2.2 Key climate variables	54
2.3 Cryosphere	73
3 Climate impacts on environmental systems	89
3.1 Oceans and marine environment	89
3.2 Coastal zones	101
3.3 Freshwater quantity and quality	112
3.4 Terrestrial ecosystems and biodiversity	127
3.5 Soil	146
4 Climate impacts on socio-economic systems and health	158
4.1 Agriculture	158
4.2 Forests and forestry	172
4.3 Fisheries and aquaculture	181
4.4 Human health	183
4.5 Energy	201
4.6 Transport services and infrastructure	205
4.7 Tourism	209
5 Vulnerability to climate change	213
5.1 Introduction	213
5.2 River flooding, water scarcity and droughts	213
5.3 Integrated assessment of vulnerability to climate change	216
5.4 Vulnerability of cities and urban areas	222
5.5 Damage costs	228

6 Indicator and data needs.....	237
6.1 Policy needs for indicators.....	237
6.2 Observations.....	242
6.3 Climate change impacts, vulnerability and adaptation research	244
7 Abbreviations and acronyms.....	246
7.1 General abbreviations and acronyms	246
7.2 Acronyms of research projects.....	251
References	253

List of figures

Figure 1.1	Cascade of uncertainties in climate impact assessments.....	44
Figure 1.2	IPCC vulnerability assessment framework	46
Figure 1.3	The concepts of risk, hazard and vulnerability in the risk-hazard framework.....	47
Figure 1.4	Links between climate change and disaster risk	48
Figure 2.1	Components of the climate system, their processes and interactions.....	49
Figure 2.2	The Earth's energy balance	50
Figure 2.3	Components needed for modelling climate change and its impacts	52
Figure 2.4	Projections for combined changes in temperature and precipitation	53
Figure 2.5	Change in global average temperature from three sources (1850–2011)	57
Figure 2.6	Global average surface temperature anomalies from in situ observations and from reanalysis	58
Figure 2.7	European average temperature (1850–2011) over land areas for annual (upper), winter (middle) and summer (lower) periods.....	59
Figure 2.8	Projected changes in global average temperature based on multi-model simulations	60
Figure 2.9	European summer temperatures for 1500–2010	64
Figure 2.10	Trend in autumn, winter and spring snow cover extent over the Northern Hemisphere (1967–2011)	75
Figure 2.11	Trend in March snow mass in Europe (excluding mountain areas) (1980–2011)....	76
Figure 2.12	Mass balance of the Greenland ice sheet from mass budget calculations (1989–2009)	78
Figure 2.13	Trend in yearly cumulated melting area of the Greenland ice sheet (1979–2011)	79
Figure 2.14	Cumulative specific net mass balance of European glaciers (1946–2010).....	81
Figure 2.15	Projected changes in the volume of all mountain glaciers and ice caps in the European glaciated regions	82
Figure 2.16	Observed permafrost temperatures from selected boreholes in European mountains	84
Figure 2.17	Comparison of active layer thickness from boreholes in the Alps, Norway and Svalbard	84
Figure 2.18	Probability of complete loss of northern Fennoscandian areas suitable for palsas in the 21st century.....	85
Figure 2.19	Trend in Arctic Sea ice extent in March and September (1979–2012).....	87
Figure 2.20	Maximum ice cover extent in the Baltic Sea (1719/1720–2010/2011)	88
Figure 3.1	Decline in pH measured at the Aloha station as part of the Hawaii Ocean time series.....	91
Figure 3.2	Ocean heat content calculated based on observations made in the upper 700 m of the water column (1955–2011).....	93
Figure 3.3	Annual average sea surface temperature anomaly in different European seas (1871–2011)	96
Figure 3.4	Decapoda larvae abundance and phenology in the central North Sea	98
Figure 3.5	<i>Calanus</i> ratio in the North Sea	100
Figure 3.6	Change in global mean sea level from 1860 to 2009.....	103
Figure 3.7	Range of high-end estimates of global sea-level rise published after the IPCC AR4.....	107
Figure 3.8	Coastline dynamics in Europe	111
Figure 3.9	Projected change in daily average river flow for four rivers	117

Figure 3.10	Trends in water temperature of large European rivers and lakes in the 20th century	123
Figure 3.11	Observed change in duration of lake and river ice cover	125
Figure 3.12	Effects of climate change on nature and biodiversity	128
Figure 3.13	Observed latitudinal shifts of four species groups over 25 years in Britain	139
Figure 3.14	Qualitative impacts of climatic and biotic variables on temperate mineral soils	150
Figure 4.1	Links between climatic drivers and agricultural indicators	159
Figure 4.2	Projected change in the share of major tree species in Europe	176
Figure 4.3	Burnt forest area in five southern European countries (1980–2010)	178
Figure 4.4	Observed change in the distribution of demersal fish in response to observed rise in sea surface temperatures	182
Figure 4.5	Impact pathways of climate change on human health	184
Figure 4.6	Number of reported extreme weather events and wildfire in EEA member and collaborating countries (1980–2011)	187
Figure 4.7	Temperature-mortality relationship in 15 European cities	190
Figure 4.8	Annual mean ozone concentrations (1999–2009) by station type	192
Figure 4.9	Trend in heating degree days in the EU-27 (1980–2009)	202
Figure 5.1	Flooded area in Dresden (Germany) during different flood events	223
Figure 5.2	European urban population trends	224
Figure 5.3	Natural disasters in EEA member countries (1980–2011)	229
Figure 5.4	Projections of economic costs from climate change and socio-economic developments for four major categories	232
Figure 5.5	Projected distribution of economic costs from climate change and socio-economic developments by impact type and European region	232

List of maps

Map TS.1	Key observed and projected climate change and impacts for the main regions in Europe.....	27
Map 2.1	Trend in annual temperature across Europe (1960–2012).....	60
Map 2.2	Projected changes in annual, summer and winter temperature across Europe	61
Map 2.3	Trends in warm days and cool nights across Europe (1960–2012).....	63
Map 2.4	Projections of extreme high temperatures	65
Map 2.5	Trends in annual precipitation across Europe (1960–2012)	66
Map 2.6	Projected changes in annual (left) and summer (right) precipitation (%) between 1961–1990 and 2071–2100.....	67
Map 2.7	Trends in consecutive wet days and consecutive dry days (1960–2012)	69
Map 2.8	Projected changes in 20-year maximum precipitation in summer and winter	70
Map 2.9	Trends in the extreme wind speeds in the period 1871–2008 based on reanalysis...	71
Map 2.10	Projected changes in extreme wind speed based on GCM and RCM ensembles.....	72
Map 2.11	Projected changes in annual snowfall days	77
Map 3.1	Location of Argo floats in 2012	94
Map 3.2	Mean annual sea surface temperature trend (in °C per year) in European seas (1987–2011).....	96
Map 3.3	Trend in absolute sea level across Europe based on satellite measurements (1992–2011).....	104
Map 3.4	Trend in relative sea level at selected European tide gauge stations (1970–2010).....	105
Map 3.5	Trends in monthly stream flow for the period 1962–2004	115
Map 3.6	Projected change in average annual and seasonal river flow	116
Map 3.7	Occurrence of major floods in Europe (1998–2009)	119
Map 3.8	Projected change in river floods with a return period of 100 years	119
Map 3.9	Water scarcity and drought events in Europe during the last decade	121
Map 3.10	Projected change in minimum river flow with return period of 20 years	122
Map 3.11	Trends in spring phenology in Europe (1971–2000)	132
Map 3.12	Trend in egg-laying dates of the Pied flycatcher across Europe (1980–2004)	134
Map 3.13	Expected average percentage of stable area of 856 plant species for two different climate scenarios by 2100	136
Map 3.14	Actual and potential future alien plant invasion hotspots (2081–2090) under two emissions scenarios.....	137
Map 3.15	European variations in the temporal trend of bird and butterfly community temperature index	140
Map 3.16	Projected impact of climate change on the potential distribution of reptiles and amphibians in 2050	141
Map 3.17	Projected changes in the climate niche space of the Small Tortoise shell	142
Map 3.18	Changes in mammalian species richness by 2100.....	143
Map 3.19	Projected spatial mismatches of the Portuguese Dappled White butterfly and its host plants	145
Map 3.20	Variations in topsoil organic carbon content across Europe.....	149
Map 3.21	Estimated soil erosion by water in Europe	152
Map 3.22	Estimated number of days for wind erosion	153
Map 3.23	Global surface soil moisture content based on remote sensing data	155
Map 3.24	Areas affected by three drought events and the effect of these events on ecosystem productivity.....	157

Map 4.1	Change in the number of frost-free days per year during the period 1975–2010 ...	161
Map 4.2	Change of flowering date for winter wheat (1975–2010)	163
Map 4.3	Projected change in dates of flowering and maturation for winter wheat	164
Map 4.4	Projected changes in effective solar radiation from two climate models.....	166
Map 4.5	Projected changes in water-limited crop yield	167
Map 4.6	Simulated change in water-limited wheat production for 2030 based on two climate models	168
Map 4.7	Rate of change of the meteorological water balance (1975–2010)	170
Map 4.8	Projected change in water availability for irrigation in the Mediterranean region by 2071–2100	171
Map 4.9	State and trend of fire danger for the period 1981–2010	179
Map 4.10	Projected changes in fire danger	180
Map 4.11	Number of people affected by flooding per million population in the WHO European Region (annual average 2000–2011)	189
Map 4.12	Modelled change in tropospheric ozone concentrations over Europe, 1958–2001 and 1978–2001	193
Map 4.13	European distribution of <i>Borrelia burgdorferi</i> in questing <i>I. ricinus</i> ticks	196
Map 4.14	Change in distribution of <i>Aedes albopictus</i> in Europe between 2008 and 2011	197
Map 4.15	Climatic suitability for the mosquitos <i>Aedes albopictus</i> and <i>Aedes aegypti</i> in Europe.....	198
Map 4.16	Trend in heating degree days in the EU-27 (1980–2009)	203
Map 4.17	Projected changes in the tourism climatic index for all seasons.....	211
Map 5.1	Estimated number of people and gross value affected by 100-year flood events in the 'Economy First' scenario for the 2050s	214
Map 5.2	Annual water stress for present conditions and projections for two scenarios.....	215
Map 5.3	Potential physical, social and cultural impact of climate change	218
Map 5.4	Potential environmental and economic impact of climate change	219
Map 5.5	Potential aggregate impact, adaptive capacity and vulnerability.....	221
Map 5.6	Elderly population in cities.....	225
Map 5.7	Factors determining vulnerability to heat waves	226
Map 5.8	Factors determining vulnerability to urban flooding.....	227

List of tables

Table TS.1	Observed and projected climate change and impacts on environmental and socio-economic systems and human health	19
Table TS.2	Key observed (O) and projected (P) climate change and impacts for the main regions in Europe.....	28
Table 1.1	Type of indicator and main purpose	35
Table 1.2	Changes in indicators 2008–2012.....	36
Table 1.3	Emissions scenarios and climate models used in projections	39
Table 3.1	Contributions to the sea-level budget since 1972.....	106
Table 3.2	Habitats and species groups negatively affected by climate change in at least one EU Member State.....	130
Table 4.1	Impacts and consequences of climate change on forest growth and forest conditions.....	175
Table 4.2	Number of people killed due to extreme weather events and wildfire by European region (1980–2011).....	186
Table 4.3	Selection of meteorological parameters that might increase under future climate change and their impact on ozone levels.....	194
Table 4.4	Overview of studies on future electricity demand due to climate change	204
Table 4.5	Overview of climate change impacts on transport infrastructure	206
Table 5.1	Coverage of European-wide damage cost studies by sector	233
Table 6.1	Essential Climate Variables that are both currently feasible for global implementation and have a high impact on UNFCCC requirements.....	243
Table 6.2	Essential Climate Variables for which satellite observations make a significant contribution.....	243
Table 7.1	Abbreviations and acronyms (except research projects)	246
Table 7.2	Acronyms of research projects.....	251
