Development of the Laminated Double Notch Shear Test

STFI-PACKFORSK

Marc Philipp Spirig

Eidgenössische Technische Hochschule Zürich
Swiss Federal Institute of Technology Zurich

Bachelor of Science Thesis
KTH Solid Mechanics

Supervisors:
Prof. Sören Östlund (KTH)
Dr Mikael Nygårds (STFI-Packforsk)
Prof. Jürg Dual (ETH)

May, 2008

Contents

1 Introduction 1
- 1.1 Shear Forces in Paper-Materials . . . 1
- 1.2 Objectives . . . 1
- 1.3 Method . . . 2

2 Paper-Material 3
- 2.1 Coordinate Systems . . . 3
- 2.2 Fibres and Bonds lead to Anisotropy . . . 3

3 Background and Theory 7
- 3.1 Measuring Shear Properties . . . 7
  - 3.1.1 Rigid Block . . . 7
  - 3.1.2 Arcan Device . . . 8
  - 3.1.3 Double Notch Shear Test . . . 8
  - 3.1.4 Inclined Double Notch Shear Test . . . 10
- 3.2 Analytical Analysis of the DNS Specimen . . . 11

4 Materials and Experimental Setup 13
- 4.1 Materials . . . 13
- 4.2 Improvement of the Experiment . . . 13
- 4.3 The Experimental Setup and Procedure . . . 14
- 4.4 Stress-Strain Behaviour of Paper-Materials . . . 16

5 Experimental Results 17
- 5.1 Comparison of DNS and LST . . . 17
  - 5.1.1 Plastic Foil Properties . . . 17
  - 5.1.2 Reduction of Elastic Deformation in the Non-Shear Zone 18
  - 5.1.3 Observations of the Experiments . . . 20
- 5.2 Peak Load and Displacement in DNS . . . 25
- 5.3 Shear Modulus by DNS on MTS . . . 27
- 5.4 Different Through-Thickness Positions . . . 29

6 Numerical Modelling **37**
6.1 Numerical Model 37
6.1.1 Geometry 37
6.1.2 Material Properties 38
6.1.3 Mesh and Elements 40
6.1.4 Damage Evolution and Plasticity 41
6.1.5 Boundary Conditions 43
6.2 Numerical Results 43
6.2.1 Comparison Experiment-Simulation 43
6.2.2 Stress Distribution and Bending Effect 44
6.2.3 Delamination 46
6.2.4 Plasticity 47

7 Conclusions and Outlook **49**
7.1 Conclusion 49
7.2 Outlook 50

A ABAQUS input file **53**
A.1 Material Definitions DNS 53
A.2 Material Definitions LST 54
