Acknowledgements	ii
Abstract	iii
Contents	iv
List of Figures	v
List of Tables	vi
1 Introduction	1
2 Banking in Liechtenstein	3
2.1 The Principality of Liechtenstein	3
2.2 The Financial Center	4
2.3 Liechtensteinische Landesbank AG	6
3 Literature Review	8
3.1 Previous research	8
3.2 Contribution of this thesis	12
3.2.1 Research Gap	12
3.2.2 Hypotheses	12
4 Data and Methodology	14
4.1 The Dataset from LLB	14
4.1.1 Data Collection	14
4.1.2 Data Description	14
4.2 Research Methodology	18
5 Results	23
5.1 t-Tests	23
5.2 Regression Models	24
6 Discussion	28
6.1 Contribution to the Literature on Electronic Banking Adoption	28
6.2 Implications for the Liechtensteinische Landesbank AG	28
6.3 Limitations and Further Research	29
7 Conclusions	30
References	31
Appendix A Fact sheet: Principality of Liechtenstein	37
Appendix B Excerpt from the dataset	37
Appendix C Variable definitions	38
Appendix D Additional regression tables	39
Declaration of Authorship	43

List of Figures

2.1	Map of the Principality of Liechtenstein	3
3.1	Theoretical lenses used to study e-banking adoption	9
4.1	Electronic banking adoption by age category	16
4.2	Population pyramid of the dataset	17
4.3	Average distances by e-banking adoption	20
5.1	Predicted probabilities of e-banking adoption as a function of distance to the next bank branch and the collective contribution of age and sex	27

List of Tables

2.1	Comparison of economic indicators	4
2.2	Comparison of key facts and figures between the three major banks in Liechtenstein	7
3.1	Previous research on demographic variables	11
4.1	Age categories of the sample	15
4.2	Sample broken down by municipalities	18
4.3	Distance of Municipalities to each bank branch	19
4.4	Summary statistics of the distance variables	19
5.1	T-test results	24
5.2	Regression models distance to closest branch (min)	25
