CONTENTS

Examples and Applications xxvi

Preface xxxiii

PART I The Linear Regression Model

CHAPTER 1 Introduction 1

- 1.1 Econometrics 1
- 1.2 Econometric Modeling 2
- 1.3 Methodology 5
- 1.4 The Practice of Econometrics 6
- 1.5 Plan of the Book 7

CHAPTER 2 The Classical Multiple Linear Regression Model 8

- 2.1 Introduction 8
- 2.2 The Linear Regression Model 8
- 2.3 Assumptions of the Classical Linear Regression Model 11
 - 2.3.1 *Linearity of the Regression Model* 12
 - 2.3.2 *Full Rank* 14
 - 2.3.3 *Regression* 15
 - 2.3.4 *Spherical Disturbances* 16
 - 2.3.5 *Data Generating Process for the Regressors* 17
 - 2.3.6 *Normality* 18
- 2.4 Summary and Conclusions 19

CHAPTER 3 Least Squares 20

- 3.1 Introduction 20
- 3.2 Least Squares Regression 20
 - 3.2.1 *The Least Squares Coefficient Vector* 21
 - 3.2.2 *Application: An Investment Equation* 22
 - 3.2.3 *Algebraic Aspects of the Least Squares Solution* 25
 - 3.2.4 *Projection* 25
- 3.3 Partitioned Regression and Partial Regression 27
- 3.4 Partial Regression and Partial Correlation Coefficients 29

3.5	Goodness of Fit and the Analysis of Variance	32
3.5.1	<i>The Adjusted R-Squared and a Measure of Fit</i>	35
3.5.2	<i>R-Squared and the Constant Term in the Model</i>	37
3.5.3	<i>Comparing Models</i>	38
3.6	Summary and Conclusions	39
CHAPTER 4 Statistical Properties of the Least Squares Estimator		43
4.1	Introduction	43
4.2	Motivating Least Squares	44
4.2.1	<i>The Population Orthogonality Conditions</i>	44
4.2.2	<i>Minimum Mean Squared Error Predictor</i>	45
4.2.3	<i>Minimum Variance Linear Unbiased Estimation</i>	46
4.3	Unbiased Estimation	46
4.4	The Variance of the Least Squares Estimator and the Gauss-Markov Theorem	48
4.5	The Implications of Stochastic Regressors	49
4.6	Estimating the Variance of the Least Squares Estimator	51
4.7	The Normality Assumption and Basic Statistical Inference	52
4.7.1	<i>Testing a Hypothesis about a Coefficient</i>	52
4.7.2	<i>Confidence Intervals for Parameters</i>	54
4.7.3	<i>Confidence Interval for a Linear Combination of Coefficients: The Oaxaca Decomposition</i>	55
4.7.4	<i>Testing the Significance of the Regression</i>	56
4.7.5	<i>Marginal Distributions of the Test Statistics</i>	57
4.8	Finite-Sample Properties of the Least Squares Estimator	58
4.8.1	<i>Multicollinearity</i>	59
4.8.2	<i>Missing Observations</i>	61
4.9	Large Sample Properties of the Least Squares Estimator	63
4.9.1	<i>Consistency of the Least Squares Estimator of β</i>	64
4.9.2	<i>Asymptotic Normality of the Least Squares Estimator</i>	65
4.9.3	<i>Consistency of s^2 and the Estimator of Asy. Var[b]</i>	67
4.9.4	<i>Asymptotic Distribution of a Function of β: The Delta Method and the Method of Krinsky and Robb</i>	68
4.9.5	<i>Asymptotic Efficiency</i>	71
4.9.6	<i>More General Data Generating Processes</i>	72
4.10	Summary and Conclusions	75
CHAPTER 5 Inference and Prediction		81
5.1	Introduction	81
5.2	Restrictions and Nested Models	81
5.3	Two Approaches to Testing Hypotheses	83
5.3.1	<i>The F Statistic and the Least Squares Discrepancy</i>	83
5.3.2	<i>The Restricted Least Squares Estimator</i>	87
5.3.3	<i>The Loss of Fit from Restricted Least Squares</i>	89

5.4	Nonnormal Disturbances and Large Sample Tests	92
5.5	Testing Nonlinear Restrictions	96
5.6	Prediction	99
5.7	Summary and Conclusions	102
CHAPTER 6 Functional Form and Structural Change		106
6.1	Introduction	106
6.2	Using Binary Variables	106
6.2.1	<i>Binary Variables in Regression</i>	106
6.2.2	<i>Several Categories</i>	107
6.2.3	<i>Several Groupings</i>	108
6.2.4	<i>Threshold Effects and Categorical Variables</i>	110
6.2.5	<i>Spline Regression</i>	111
6.3	Nonlinearity in the Variables	112
6.3.1	<i>Functional Forms</i>	112
6.3.2	<i>Identifying Nonlinearity</i>	114
6.3.3	<i>Intrinsic Linearity and Identification</i>	117
6.4	Modeling and Testing for a Structural Break	120
6.4.1	<i>Different Parameter Vectors</i>	121
6.4.2	<i>Insufficient Observations</i>	121
6.4.3	<i>Change in a Subset of Coefficients</i>	122
6.4.4	<i>Tests of Structural Break with Unequal Variances</i>	123
6.4.5	<i>Predictive Test</i>	127
6.5	Summary and Conclusions	128
CHAPTER 7 Specification Analysis and Model Selection		133
7.1	Introduction	133
7.2	Specification Analysis and Model Building	133
7.2.1	<i>Bias Caused by Omission of Relevant Variables</i>	133
7.2.2	<i>Pretest Estimation</i>	134
7.2.3	<i>Inclusion of Irrelevant Variables</i>	136
7.2.4	<i>Model Building—A General to Simple Strategy</i>	136
7.3	Choosing Between Nonnested Models	137
7.3.1	<i>Testing Nonnested Hypotheses</i>	138
7.3.2	<i>An Encompassing Model</i>	138
7.3.3	<i>Comprehensive Approach—The J Test</i>	139
7.3.4	<i>Vuong's Test and the Kullback-Leibler Information Criterion</i>	140
7.4	Model Selection Criteria	142
7.5	Model Selection	143
7.5.1	<i>Classical Model Selection</i>	144
7.5.2	<i>Bayesian Model Averaging</i>	144
7.6	Summary and Conclusions	146

PART II The Generalized Regression Model

CHAPTER 8 The Generalized Regression Model and Heteroscedasticity 148

- 8.1 Introduction 148
- 8.2 Least Squares Estimation 149
 - 8.2.1 *Finite-Sample Properties of Ordinary Least Squares* 150
 - 8.2.2 *Asymptotic Properties of Least Squares* 151
 - 8.2.3 *Robust Estimation of Asymptotic Covariance Matrices* 153
- 8.3 Efficient Estimation by Generalized Least Squares 154
 - 8.3.1 *Generalized Least Squares (GLS)* 154
 - 8.3.2 *Feasible Generalized Least Squares (FGLS)* 156
- 8.4 Heteroscedasticity 158
 - 8.4.1 *Ordinary Least Squares Estimation* 159
 - 8.4.2 *Inefficiency of Least Squares* 160
 - 8.4.3 *The Estimated Covariance Matrix of b* 160
 - 8.4.4 *Estimating the Appropriate Covariance Matrix for Ordinary Least Squares* 162
- 8.5 Testing for Heteroscedasticity 165
 - 8.5.1 *White's General Test* 165
 - 8.5.2 *The Breusch-Pagan/JGodfrey LM Test* 166
- 8.6 Weighted Least Squares When σ^2 Is Known 167
- 8.7 Estimation When β Contains Unknown Parameters 169
- 8.8 Applications 170
 - 8.8.1 *Multiplicative Heteroscedasticity* 170
 - 8.8.2 *Groupwise Heteroscedasticity* 172
- 8.9 Summary and Conclusions 175

CHAPTER 9 Models for Panel Data 180

- 9.1 Introduction 180
- 9.2 Panel Data Models 180
 - 9.2.1 *General Modeling Framework for Analyzing Panel Data* 182
 - 9.2.2 *Model Structures* 183
 - 9.2.3 *Extensions* 184
 - 9.2.4 *Balanced and Unbalanced Panels* 184
- 9.3 The Pooled Regression Model 185
 - 9.3.1 *Least Squares Estimation of the Pooled Model* 185
 - 9.3.2 *Robust Covariance Matrix Estimation* 185
 - 9.3.3 *Clustering and Stratification* 188
 - 9.3.4 *Robust Estimation Using Group Means* 188
 - 9.3.5 *Estimation With First Differences* 190
 - 9.3.6 *The Within-and Between-Groups Estimators* 191
- 9.4 The Fixed Effects Model 193
 - 9.4.1 *Least Squares Estimation* 194
 - 9.4.2 *Small T Asymptotics* 196

9.4.3	<i>Testing the Significance of the Group Effects</i>	197
9.4.4	<i>Fixed Time and Group Effects</i>	197
9.5	Random Effects	200
9.5.7	<i>Generalized Least Squares</i>	202
9.5.2	<i>Feasible Generalized Least Squares When E Is Unknown</i>	203
9.5.3	<i>Testing for Random Effects</i>	205
9.5.4	<i>Hausman's Specification Test for the Random Effects Model</i>	208
9.5.5	<i>Extending the Unobserved Effects Model: Mundlak's Approach</i>	209
9.6	Nonspherical Disturbances and Robust Covariance Estimation	210
9.6.7	<i>Robust Estimation of the Fixed Effects Model</i>	211
9.6.2	<i>Heteroscedasticity in the Random Effects Model</i>	212
9.6.3	<i>Autocorrelation in Panel Data Models</i>	213
9.7	Extensions of the Random Effects Model	213
9.7.7	<i>Nested Random Effects</i>	214
9.7.2	<i>Spatial Autocorrelation</i>	218
9.8	Parameter Heterogeneity	222
9.8.7	<i>The Random Coefficients Model</i>	223
9.8.2	<i>Random Parameters and Simulation-Based Estimation</i>	226
9.8.3	<i>Two-Step Estimation of Panel Data Models</i>	229
9.8.4	<i>Hierarchical Linear Models</i>	233
9.8.5	<i>Parameter Heterogeneity and Dynamic Panel Data Models</i>	238
9.8.6	<i>Nonstationary Data and Panel Data Models</i>	243
9.9	Consistent Estimation of Dynamic Panel Data Models	244
9.10	Summary and Conclusions	246
CHAPTER 10 Systems of Regression Equations		252
10.1	Introduction	252
10.2	The Seemingly Unrelated Regressions Model	254
10.2.1	<i>Generalized Least Squares</i>	256
10.2.2	<i>Seemingly Unrelated Regressions with Identical Regressors</i>	257
10.2.3	<i>Feasible Generalized Least Squares</i>	258
10.2.4	<i>Testing Hypotheses</i>	259
10.2.5	<i>Heteroscedasticity</i>	263
10.2.6	<i>Autocorrelation</i>	263
10.2.7	<i>A Specification Test for the SUR Model</i>	264
10.2.8	<i>The Pooled Model</i>	266
10.3	Panel Data Applications	267
10.3.1	<i>Random Effects SUR Models</i>	267
10.3.2	<i>The Random and Fixed Effects Models</i>	268

10.4	Systems of Demand Equations: Singular Systems	272
10.4.1	<i>Cobb-Douglas Cost Function (Example 6.3 Continued)</i>	273
10.4.2	<i>Flexible Functional Forms: The Translog Cost Function</i>	275
10.5	Summary and Conclusions	280

CHAPTER 11 Nonlinear Regressions and Nonlinear Least Squares 285

11.1	Introduction	285
11.2	Nonlinear Regression Models	285
11.2.1	<i>Assumptions of the Nonlinear Regression Model</i>	286
11.2.2	<i>The Orthogonality Condition and The Sum of Squares</i>	287
11.2.3	<i>The Linearized Regression</i>	288
11.2.4	<i>Large Sample Properties of the Nonlinear Least Squares Estimator</i>	290
11.2.5	<i>Computing the Nonlinear Least Squares Estimator</i>	292
11.3	Applications	294
11.3.1	<i>A Nonlinear Consumption Function</i>	294
11.3.2	<i>The Box-Cox Transformation</i>	296
11.4	Hypothesis Testing and Parametric Restrictions	298
11.4.1	<i>Significance Tests for Restrictions: F and Wald Statistics</i>	298
11.4.2	<i>Tests Based on the LM Statistic</i>	299
11.5	Nonlinear Systems of Equations	300
11.6	Two-Step Nonlinear Least Squares Estimation	302
11.7	Panel Data Applications	307
11.7.1	<i>A Robust Covariance Matrix for Nonlinear Least Squares</i>	307
11.7.2	<i>Fixed Effects</i>	308
11.7.3	<i>Random Effects</i>	310
11.8	Summary and Conclusions	311

PART III Instrumental Variables and Simultaneous Equations Models

CHAPTER 12 Instrumental Variables Estimation 314

12.1	Introduction	314
12.2	Assumptions of the Model	315
12.3	Estimation	316
12.3.1	<i>Ordinary Least Squares</i>	316
12.3.2	<i>The Instrumental Variables Estimator</i>	316
12.3.3	<i>Two-Stage Least Squares</i>	318
12A	The Hausman and Wu Specification Tests and an Application to Instrumental Variable Estimation	321
12.5	Measurement Error	325
12.5.1	<i>Least Squares Attenuation</i>	325
12.5.2	<i>Instrumental Variables Estimation</i>	327
12.5.3	<i>Proxy Variables</i>	328
Yl.d	Estimation of the Generalized Regression Model	332

12.7	Nonlinear Instrumental Variables Estimation	333
12.8	Panel Data Applications	336
	12.8.1 <i>Instrumental Variables Estimation of the Random Effects Model—The Hausman and Taylor Estimator</i>	336
	12.8.2 <i>Dynamic Panel Data Models—The Anderson/Hsiao and -v Arellano/Bond Estimators</i>	340
12.9	Weak Instruments	350
12.10	Summary and Conclusions	352
CHAPTER 13 Simultaneous Equations Models		354
13.1	Introduction	354
13.2	Fundamental Issues in Simultaneous Equations Models	354
	13.2.1 <i>Illustrative Systems of Equations</i>	354
	13.2.2 <i>Endogeneity and Causality</i>	357
	13.2.3 <i>A General Notation for Linear Simultaneous Equations Models</i>	358
13.3	The Problem of Identification	361
	13.3.1 <i>The Rank and Order Conditions for Identification</i>	365
	13.3.2 <i>Identification through Other Nonsample Information</i>	370
13.4	Methods of Estimation	370
13.5	Single Equation: Limited Information Estimation Methods	371
	13.5.1 <i>Ordinary Least Squares</i>	371
	13.5.2 <i>Estimation by Instrumental Variables</i>	372
	13.5.3 <i>Two-Stage Least Squares</i>	373
	13.5.4 <i>Limited Information Maximum Likelihood and the K Class of Estimators</i>	375
	13.5.5 <i>Testing in the Presence of Weak Instruments</i>	377
	13.5.6 <i>Two-Stage Least Squares in Models That Are Nonlinear in Variables</i>	380
13.6	System Methods of Estimation	380
	13.6.1 <i>Three-Stage Least Squares</i>	381
	13.6.2 <i>Full Information Maximum Likelihood</i>	383
13.7	Comparison of Methods—Klein's Model I	385
13.8	Specification Tests	387
13.9	Properties of Dynamic Models	389
	13.9.1 <i>Dynamic Models and Their Multipliers</i>	389
	13.9.2 <i>Stability</i>	390
	13.9.3 <i>Adjustment to Equilibrium</i>	391
13.10	Summary and Conclusions	394
 PART IV Estimation Methodology		
CHAPTER 14 Estimation Frameworks in Econometrics		398
14.1	Introduction	398

14.2	Parametric Estimation and Inference	400
14.2.1	Classical Likelihood-Based Estimation	400
14.2.2	Modeling Joint Distributions with Copula Functions	402
14.3	Semiparametric Estimation	405
74.3.7	"* GMM Estimation in Econometrics	406
14.3.2	Least Absolute Deviations Estimation	406
14.3.3	Partially Linear Regression	409
14.3.4	Kernel Density Methods	41.1.
14.3.5	Comparing Parametric and Semiparametric Analyses	412
14.4	Nonparametric Estimation	413
74.4.7	Kernel Density Estimation	414
14.4.2	Nonparametric Regression	416
14.5	Properties of Estimators	420
74.5.7	Statistical Properties of Estimators	420
14.5.2	Extremum Estimators	421
14.5.3	Assumptions for Asymptotic Properties of Extremum Estimators	421
14.5.4	Asymptotic Properties of Estimators	424
14.5.5	Testing Hypotheses	425
14.6	Summary and Conclusions	426 "

CHAPTER 15 Minimum Distance Estimation and the Generalized Method of Moments 428

15.1	Introduction	428
15.2	Consistent Estimation: The Method of Moments	429
75.2.7	Random Sampling and Estimating the Parameters of Distributions	430
15.2.2	Asymptotic Properties of the Method of Moments Estimator	434
15.2.3	Summary—The Method of Moments	436
15.3	Minimum Distance Estimation	436
15.4	The Generalized Method of Moments (GMM) Estimator	441
75.4.7	Estimation Based on Orthogonality Conditions	442
15.4.2	Generalizing the Method of Moments	443
15.4.3	Properties of the GMM Estimator	447
15.5	Testing Hypotheses in the GMM Framework	451
75.5.7	Testing the Validity of the Moment Restrictions	452
15.5.2	GMM Counterparts to the WALD, LM, and LR Tests	453
15.6	GMM Estimation of Econometric Models	455
15.6.1	Single-Equation Linear Models	455
15.6.2	Single-Equation Nonlinear Models	461
15.6.3	Seemingly Unrelated Regression Models	464
15.6.4	Simultaneous Equations Models with Heteroscedasticity	466
15.6.5	GMM Estimation of Dynamic Panel Data Models	469
15.7	Summary and Conclusions	480

CHAPTER 16	Maximum Likelihood Estimation	482
16.1	Introduction	482
16.2	The Likelihood Function and Identification of the Parameters	482
16.3	Efficient Estimation: The Principle of Maximum Likelihood	484
16.4	Properties of Maximum Likelihood Estimators	486
76.4.1	<i>Regularity Conditions</i>	487
76.4.2	<i>Properties of Regular Densities</i>	488
76.4.3	<i>The Likelihood Equation</i>	490
76.4.4	<i>the Information Matrix Equality</i>	490
76.4.5	<i>Asymptotic Properties of the Maximum Likelihood Estimator</i>	490
76.4.5.a	<i>Consistency</i>	491
76.4.5.b	<i>Asymptotic Normality</i>	492
76.4.5.c	<i>Asymptotic Efficiency</i>	493
76.4.5.d	<i>Invariance</i>	494
76.4.5.e	<i>Conclusion</i>	494
76.4.6	<i>Estimating the Asymptotic Variance of the Maximum Likelihood Estimator</i>	494
16.5	Conditional Likelihoods, Econometric Models, and the GMM Estimator	496
16.6	Hypothesis and Specification Tests and Fit Measures	498
76.6.1	<i>The Likelihood Ratio Test</i>	498
76.6.2	<i>The Wald Test</i>	500
76.6.3	<i>The Lagrange Multiplier Test</i>	502
76.6.4	<i>An Application of the Likelihood-Based Test Procedures</i>	504
76.6.5	<i>Comparing Models and Computing Model Fit</i>	506
16.7	Two-Step Maximum Likelihood Estimation	507
16.8	Pseudo-Maximum Likelihood Estimation and Robust Asymptotic Covariance Matrices	511
76.8.1	<i>Maximum Likelihood and GMM Estimation</i>	512
76.8.2	<i>Maximum Likelihood and M Estimation</i>	512
76.8.3	<i>Sandwich Estimators</i>	514
76.8.4	<i>Cluster Estimators</i>	515
16.9	Applications of Maximum Likelihood Estimation	517
76.9.1	<i>The Normal Linear Regression Model</i>	518
76.9.2	<i>The Generalized Regression Model</i>	522
76.9.2.a	<i>Multiplicative Heteroscedasticity</i>	523
76.9.2.b	<i>Autocorrelation</i>	527
76.9.3	<i>Seemingly Unrelated Regression Models</i>	529
76.9.3.a	<i>The Pooled Model</i>	530
76.9.3.b	<i>The SUR Model</i>	531
76.9.3.c	<i>Exclusion Restrictions</i>	532

76.9.4	<i>Simultaneous Equations Models</i>	536
16.9.5	<i>Maximum Likelihood Estimation of Nonlinear Regression Models</i>	537
16.9.5.a	<i>Nonnormal Disturbances— The Stochastic Frontier Model</i>	538
16.9.5.b	<i>ML Estimation of a Geometric Regression Model for Count Data</i>	542
16.9.6	<i>Panel Data Applications</i>	547
16.9.6.a	<i>ML Estimation of the Linear Random Effects Model</i>	547
16.9.6.b	<i>Random Effects in Nonlinear Models: MLE using Quadrature</i>	550
16.9.6.c	<i>Fixed Effects in Nonlinear Models: Full MLE</i>	554
16.9.7	<i>Latent Class and Finite Mixture Models</i>	558
16.9.7.a	<i>A Finite Mixture Model</i>	559
16.9.7.b	<i>Measured and Unmeasured Heterogeneity</i>	560
16.9.7.C	<i>Predicting Class Membership</i>	561
16.9.7.d	<i>A Conditional Latent Class Model</i>	561
16.9.7.e	<i>Determining the Number of Classes</i>	564
16.9.7.f	<i>A Panel Data Application</i>	564
16.10	<i>Summary and Conclusions</i>	567

CHAPTER 17 Simulation-Based Estimation and Inference 573

17.1	<i>Introduction</i>	573
17.2	<i>Random Number Generation</i>	573
17.2.1	<i>Generating Pseudo-Random Numbers</i>	574
17.2.2	<i>Sampling from a Standard Uniform Population</i>	575
17.2.3	<i>Sampling from Continuous Distributions</i>	575
17.2.4	<i>Sampling from a Multivariate Normal Population</i>	576
17.2.5	<i>Sampling from a Discrete Population</i>	576
17.3	<i>Monte Carlo Integration</i>	576
17.3.1	<i>Halton Sequences and Random Draws for Simulation-Based Integration</i>	577
17.3.2	<i>Importance Sampling</i>	580
17.3.3	<i>Computing Multivariate Normal Probabilities Using the GHK Simulator</i>	582
17.4	<i>Monte Carlo Studies</i>	584
17.4.1	<i>A Monte Carlo Study: Behavior of a Test Statistic</i>	585
17.4.2	<i>A Monte Carlo Study: The Incidental Parameters Problem</i>	586
17.5	<i>Simulation-Based Estimation</i>	589
17.5.1	<i>Maximum Simulated Likelihood Estimation of Random Parameters Models</i>	590
17.5.2	<i>The Method of Simulated Moments</i>	595
17.6	<i>Bootstrapping</i>	596
17.7	<i>Summary and Conclusions</i>	598

CHAPTER 18 Bayesian Estimation and Inference	600
18.1 Introduction	600
18.2 Bayes Theorem and the Posterior Density	601
18.3 Bayesian Analysis of the Classical Regression Model	603
78.3.7 <i>Analysis with a Noninformative Prior</i>	604
18.3.2 <i>Estimation with an Informative Prior Density</i>	606
18.4 Bayesian Inference	609
78.4.7 <i>Point Estimation</i>	609
18.4.2 <i>Interval Estimation</i>	610
18.4.3 <i>Hypothesis Testing</i>	611
18.4.4 <i>Large Sample Results</i>	613
18.5 Posterior Distributions and the Gibbs Sampler	613
18.6 Application: Binomial Probit Model	616
18.7 Panel Data Application: Individual Effects Models	619
18.8 Hierarchical Bayes Estimation of a Random Parameters Model	621
18.9 Summary and Conclusions	623

PART V Time Series and Macroeconometrics

CHAPTER 19 Serial Correlation	626
19.1 Introduction	626
19.2 The Analysis of Time-Series Data	629
19.3 Disturbance Processes	632
19.3.1 <i>Characteristics of Disturbance Processes</i>	632
19.3.2 <i>AR(1) Disturbances</i>	633
19A Some Asymptotic Results for Analyzing Time-Series Data	635
19.4.1 <i>Convergence of Moments—The Ergodic Theorem</i>	636
19.4.2 <i>Convergence to Normality—A Central Limit Theorem</i>	638
19.5 Least Squares Estimation	640
79.5.7 <i>Asymptotic Properties of Least Squares</i>	640
19.5.2 <i>Estimating the Variance of the Least Squares Estimator</i>	642
19.6 GMM Estimation	643
19.7 Testing for Autocorrelation	644
19.7.1 <i>Lagrange Multiplier Test</i>	644
19.7.2 <i>Box and Pierce's Test and Ljung's Refinement</i>	645
19.7.3 <i>The Durbin-Watson Test</i>	645
19.7.4 <i>Testing in the Presence of a Lagged Dependent Variable</i>	646
19.7.5 <i>Summary of Testing Procedures</i>	646
19.8 Efficient Estimation When σ^2 Is Known	647
19.9 Estimation When σ^2 Is Unknown	648
79.9.7 <i>AR(1) Disturbances'</i>	648
19.9.2 <i>Application: Estimation of a Model with Autocorrelation</i>	649
19.9.3 <i>Estimation with a Lagged Dependent Variable</i>	651
19.10 Autocorrelation in Panel Data	652

19.11	Common Factors	655
19.12	Forecasting in the Presence of Autocorrelation	656

20.6.8.d	<i>Inference</i>	707
20.6.8.e	<i>Empirical Results</i>	707
20.6.9	<i>VARs In Microeconomics</i>	711
20.7	Summary and Conclusions	712

CHAPTER 21 Time-Series Models 715

- 21.1 Introduction 715
- 21.2 Stationary Stochastic Processes 716
 - 21.2.1 *Autoregressive Moving-Average Processes* 716
 - 21.2.2 *Stationarity and Invertibility* 718
 - 21.2.3 *Autocorrelations of a Stationary Stochastic Process* 721
 - 21.2.4 *Partial Autocorrelations of a Stationary Stochastic Process* 723
 - 21.2.5 *Modeling Univariate Time Series* 726
 - 21.2.6 *Estimation of the Parameters of a Univariate Time Series* 728
- 21.3 The Frequency Domain 731
 - 21.3.1 *Theoretical Results* 732
 - 21.3.2 *Empirical Counterparts* 734
- 21.4 Summary and Conclusions 738

CHAPTER 22 Nonstationary Data 739

- 22.1 Introduction 739
- 22.2 Nonstationary Processes and Unit Roots 739
 - 22.2.1 *Integrated Processes and Differencing* 739
 - 22.2.2 *Random Walks, Trends, and Spurious Regressions* 741
 - 22.2.3 *Tests for Unit Roots in Economic Data* 744
 - 22.2.4 *The Dickey-Fuller Tests* 745
 - 22.2.5 *The KPSS Test of Stationarity* 755
- 22.3 Cointegration 756
 - 22.3.1 *Common Trends* 759
 - 22.3.2 *Error Correction and VAR Representations* 760
 - 22.3.3 *Testing for Cointegration* 761
 - 22.3.4 *Estimating Cointegration Relationships* 764
 - 22.3.5 *Application: German Money Demand* 764
 - 22.3.5.a *Cointegration Analysis and a Long-Run Theoretical Model* 765
 - 22.3.5.b *Testing for Model Instability* 766
- 22.4 Nonstationary Panel Data 767
- 22.5 Summary and Conclusions 768

PART VI Cross Sections, Panel Data, and Microeconometrics**CHAPTER 23 Models for Discrete Choice 770**

- 23.1 Introduction 770
- 23.2 Discrete Choice Models 770
- 23.3 Models for Binary Choice 772
 - 23.3.1 *The Regression Approach* 772
 - 23.3.2 *Latent Regression—Index Function Models* 775
 - 23.3.3 *Random Utility Models* 777

23.4	Estimation and Inference in Binary Choice Models	777
23.4.1	<i>Robust Covariance Matrix Estimation</i>	780
23.4.2	<i>Marginal Effects and Average Partial Effects</i>	780
23.4.3	<i>Hypothesis Tests</i>	785
23.4.4	<i>Specification Tests for Binary Choice Models</i>	787
	23.4.4.a <i>Omitted Variables</i>	788
	23.4.4.b <i>Heteroscedasticity</i>	788
23.4.5	<i>Measuring Goodness of FIT</i>	790

EXAMPLES AND APPLICATIONS

CHAPTER 1	Introduction	1
Example 1.1	Behavioral Models and the Nobel Laureates	1
Example 1.2	Keynes's Consumption Function	2
CHAPTER 2	The Classical Multiple Linear Regression Model	8
Example 2.1	Keynes's Consumption Function	9
Example 2.2	Earnings and Education	10
Example 2.3	The U.S. Gasoline Market	13
Example 2.4	The Translog Model	13
Example 2.5	Short Rank	14
CHAPTER 3	Least Squares	20
Example 3.1	Partial Correlations	31
Example 3.2	Fit of a Consumption Function	34
Example 3.3	Analysis of Variance for an Investment Equation	34
CHAPTER 4	Statistical Properties of the Least Squares Estimator	43
Example 4.1	The Sampling Distribution of a Least Squares Estimator	47
Example 4.2	Sampling Variance in the Two-Variable Regression Model	48
Example 4.3	Earnings Equation	53
Example 4.4	Confidence Interval for the Income Elasticity of Demand for Gasoline	55
Example 4.5	<i>F</i> Test for the Earnings Equation	57
Example 4.6	Multicollinearity in the Longley Data	60
Example 4.7	Nonlinear Functions of Parameters: The Delta Method	69
Example 4.8	Nonlinear Functions of Parameters: The Krinsky and Robb Method	70
Example 4.9	The Gamma Regression Model	72
CHAPTER 5	Inference and Prediction	81
Example 5.1	Restricted Investment Equation	86
Example 5.2	Production Function	90
Example 5.3	A Long-Run Marginal Propensity to Consume	97
Example 5.4	Prediction for Investment	99
CHAPTER 6	Functional Form and Structural Change	106
Example 6.1	Dummy Variable in an Earnings Equation	106
Example 6.2	Analysis of Covariance	108

Example 6.3	Functional Form for a Nonlinear Cost Function	114
Example 6.4	Intrinsically Linear Regression	118
Example 6.5	CES Production Function	119
Example 6.6	The World Health Report	124
Example 6.7	Structural Break in the Gasoline Market	125
CHAPTER 7	Specification Analysis and Model Selection	133
Example 7.1	Omitted Variables	134
Example 7.2	<i>J</i> Test for a Consumption Function	140
Example 7.3	Vuong Test for a Consumption Function	142
Example 7.4	Bayesian Averaging of Classical Estimates	146
CHAPTER 8	The Generalized Regression Model and Heteroscedasticity	148
Example 8.1	Heteroscedastic Regression	159
Example 8.2	The White Estimator	164
Example 8.3	Testing for Heteroscedasticity	167
Example 8.4	Multiplicative Heteroscedasticity	171
Example 8.5	Groupwise Heteroscedasticity	173
CHAPTER 9	Models for Panel Data	180
Example 9.1	Wage Equation	186
Example 9.2	Robust Estimators of the Wage Equation	190
Example 9.3	Analysis of Covariance and the World Health Organization Data	192
Example 9.4	Fixed Effects Wage Equation	199
Example 9.5	Testing for Random Effects	206
Example 9.6	Estimates of the Random Effects Model	207
Example 9.7	Hausman Test for Fixed versus Random Effects	209
Example 9.8	Variable Addition Test for Fixed versus Random Effects	210
Example 9.9	Statewide Productivity	216
Example 9.10	Spatial Autocorrelation in Real Estate Sales	220
Example 9.11	Spatial Lags in Health Expenditures	221
Example 9.12	Random Coefficients Model	224
Example 9.13	Minimum Simulated Sum of Squares Estimates of the Production Function	228
Example 9.14	Two-Step Estimation of Cornwell and Rupert's Wage Equation	231
Example 9.15	Fannie Mae's Pass Through	232
Example 9.16	Hierarchical Linear Model of Home Prices	233
Example 9.17	Mixed Linear Model for Wages	235
Example 9.18	Dynamic Panel Data Models	238
Example 9.19	A Mixed Fixed Growth Model for Developing Countries	242
CHAPTER 10	Systems of Regression Equations	252
Example 10.1	Munnell's Statewide Production Data	254
Example 10.2	Estimated SUR Model for Regional Output	259
Example 10.3	Hypothesis Tests in the SUR Model	262
Example 10.4	Testing for Cross-Equation Correlation	265
Example 10.5	Demand for Electricity and Gas	268

Example 10.6	Hospital Costs	270
Example 10.7	Stone's Expenditure System	272
Example 10.8	A Cost Function for U.S. Manufacturing	278
CHAPTER 11	Nonlinear Regressions and Nonlinear Least Squares	285
Example 11.1	CES Production Function	285
Example 11.2	Translog Demand System	286
Example 11.3	First-Order Conditions for a Nonlinear Model	288
Example 11.4	Linearized Regression	289
Example 11.5	Analysis of a Nonlinear Consumption Function	294
Example 11.6	Multicollinearity in Nonlinear Regression	296
Example 11.7	Flexible Cost Function	296
Example 11.8	Hypothesis Tests in a Nonlinear Regression Model	300
Example 11.9	Two-Step Estimation of a Credit Scoring Model	304
Example 11.10	Health Care Utilization	307
Example 11.11	Exponential Model with Fixed Effects	309
CHAPTER 12	Instrumental Variables Estimation	314
Example 12.1	Models in Which Least Squares Is Inconsistent	314
Example 12.2	Streams as Instruments	320
Example 12.3	Labor Supply Model	320,324
Example 12.4	Hausman Test for a Consumption Function	324
Example 12.5	Income and Education in a Study of Twins	329
Example 12.6	Instrumental Variables Estimates of the Consumption Function	336
Example 12.7	The Returns to Schooling	339
Example 12.8	Dynamic Labor Supply Equation	348
CHAPTER 13	Simultaneous Equations Models	354
Example 13.1	A Small Macroeconomic Model	356
Example 13.2	Klein's Model I	357
Example 13.3	Structure and Reduced Form	360
Example 13.4	Observational Equivalence	362
Example 13.5	Identification	364
Example 13.6	Identification of Klein's Model I	369
Example 13.7	Testing Overidentifying Restrictions	388
Example 13.8	Dynamic Model	393
CHAPTER 14	Estimation Frameworks in Econometrics	398
Example 14.1	The Linear Regression Model	401
Example 14.2	The Stochastic Frontier Model	402
Example 14.3	Joint Modeling of a Pair of Event Counts	405
Example 14.4	LAD Estimation of a Cobb-Douglas Production Function	408
Example 14.5	Partially Linear Translog Cost Function	410
Example 14.6	Semiparametric Estimator for Binary Choice Models	411
Example 14.7	A Model of Vacation Expenditures	412
Example 14.8	A Nonparametric Average Cost Function	418

CHAPTER 15	Minimum Distance Estimation and the Generalized Method of Moments	428
Example 15.1	Euler Equations and Life Cycle Consumption	428
Example 15.2	Method of Moments Estimator for $N[\mu, \sigma^2]$	430
Example 15.3	Inverse Gaussian (Wald) Distribution	431
Example 15.4	Mixtures of Normal Distributions	432
Example 15.5	Gamma Distribution	433, 435
Example 15.6	Minimum Distance Estimation of a Hospital Cost Function	439
Example 15.7	GMM Estimation of the Parameters of a Gamma Distribution	445
Example 15.8	Empirical Moment Equation for Instrumental Variables	447
Example 15.9	Overidentifying Restrictions	452
Example 15.10	GMM Estimation of a Dynamic Panel Data Model of Local Government Expenditures	476
CHAPTER 16	Maximum Likelihood Estimation	482
Example 16.1	Identification of Parameters	484
Example 16.2	Log-Likelihood Function and Likelihood Equations for the Normal Distribution	486
Example 16.3	Information Matrix for the Normal Distribution	493
Example 16.4	Variance Estimators for an MLE	496
Example 16.5	Two-Step ML Estimation	509
Example 16.6	Multiplicative Heteroscedasticity	526
Example 16.7	Autocorrelation in a Money Demand Equation	529
Example 16.8	ML Estimates of a Seemingly Unrelated Regressions Model	534
Example 16.9	Stochastic Frontier Model	541
Example 16.10	Geometric Model for Doctor Visits	545
Example 16.11	Maximum Likelihood and FGLS Estimates of a Wage Equation	549
Example 16.12	Random Effects Geometric Regression Model	553
Example 16.13	Fixed and Random Effects Geometric Regression	557
Example 16.14	Latent Class Model for Grade Point Averages	559
Example 16.15	Latent Class Regression Model for Grade Point Averages	562
Example 16.16	Latent Class Model for Health Care Utilization	566
CHAPTER 17	Simulation-Based Estimation and Inference	573
Example 17.1	Fractional Moments of the Truncated Normal Distribution	576
Example 17.2	Estimating the Lognormal Mean	579
Example 17.3	Mean of a Lognormal Distribution (Continued)	581
Example 17.4	Monte Carlo Study of the Mean Versus the Median	584
Section 17.4.1	A Monte Carlo Study: Behavior of a Test Statistic	585
Section 17.4.2	A Monte Carlo Study: The Incidental Parameters Problem	586

Example 17.5	Random Effects Geometric Regression	592
Example 17.6	Maximum Simulated Likelihood Estimation of a Binary Choice Model	593
Example 17.7	Bootstrapping the Variance of the Median	597
CHAPTER 18 Bayesian Estimation and Inference		600
Example 18.1	Bayesian Estimation of a Probability	602
Example 18.2	Estimation with a Conjugate Prior	607
Example 18.3	Bayesian Estimate of the Marginal Propensity to Consume	609
Example 18.4	Posterior Odds for the Classical Regression Model	612
Example 18.5	Gibbs Sampling from the Normal Distribution	614
Example 18.6	Gibbs Sampler for a Probit Model	618
CHAPTER 19 Serial Correlation		626
Example 19.1	Money Demand Equation	626
Example 19.2	Autocorrelation Induced by Misspecification of the Model	626
Example 19.3	Negative Autocorrelation in the Phillips Curve	627
Example 19.4	Autocorrelation Consistent Covariance Estimation	643
Example 19.5	Panel Data Models with Autocorrelation	653
Example 19.6	Test for Common Factors	656
Example 19.7	Stochastic Volatility	658
Example 19.8	GARCH Model for Exchange Rate Volatility	665
CHAPTER 20 Models with Lagged Variables		670
Example 20.1	A Structural Model of the Demand for Gasoline	671
Example 20.2	Expectations-Augmented Phillips Curve	679
Example 20.3	Price and Income Elasticities of Demand for Gasoline	680
Example 20.4	A Rational Lag Model	685
Example 20.5	An Error Correction Model for Consumption	691
Example 20.6	Granger Causality	699
Section 20.6.8	Policy Analysis with a VAR	703
Example 20.7	VAR for Municipal Expenditures	711
CHAPTER 21 Time-Series Models		715
Example 21.1	ACF and PACF for a Series of Bond Yields	729
Example 21.2	Spectral Density Function for an AR(1) Process	733
Example 21.3	Spectral Analysis of the Growth Rate of Real GNP	735
CHAPTER 22 Nonstationary Data		739
Example 22.1	A Nonstationary Series	740
Example 22.2	Tests for Unit Roots	748
Example 22.3	Augmented Dickey-Fuller Test for a Unit Root in GDP	754
Section 22.3.5	German Money Demand	764
Example 22.4	Is There a Unit Root in GDP?	755
Example 22.5	Cointegration in Consumption and Output	757
Example 22.6	Several Cointegrated Series	757
Example 22.7	Multiple Cointegrating Vectors	759
Example 22.8	(Continued) Cointegration in Consumption and Output	762

CHAPTER 23	Models for Discrete Choice	770
Example 23.1	Labor Force Participation Model	771
Example 23.2	Structural Equations for a Probit Model	776
Example 23.3	Probability Models	781
Example 23.4	Average Partial Effects	785
Example 23.5	Specification Tests in a Labor Force Participation Model	789
Example 23.6	Prediction with a Probit Model	793
Example 23.7	An Intertemporal Labor Force Participation Equation	795
Example 23.8	Binary Choice Models for Panel Data	801
Example 23.9	Fixed Effects Logit Models: Magazine Prices Revisited	805
Example 23.10	Semiparametric Models of Heterogeneity	806
Example 23.11	Parameter Heterogeneity in a Binary Choice Model	808
Section 23.11.7	Conditional Logit Model for Travel Mode Choice	852
Example 23.12	A Comparison of Binary Choice Estimators	811
Example 23.13	Labor Supply Model	815
Example 23.14	Tetrachoric Correlation	819
Example 23.15	Bivariate Probit Model for Health Care Utilization	822
Example 23.16	A Multivariate Probit Model for Product Innovations	828
Example 23.17	Rating Assignments	834
Example 23.18	Calculus and Intermediate Economics Courses	835
Example 23.19	Health Satisfaction	838
CHAPTER 24	Truncation, Censoring, and Sample Selection	863
Example 24.1	Truncated Uniform Distribution	865
Example 24.2	A Truncated Lognormal Income Distribution	866
Example 24.3	Censored Random Variable	871
Example 24.4	Estimated Tobit Equations for Hours Worked	873
Example 24.5	Multiplicative Heteroscedasticity in the Tobit Model	876
Example 24.6	Incidental Truncation	883
Example 24.7	A Model of Labor Supply	884
Example 24.8	Female Labor Supply	888
Example 24.9	A Mover-Stayer Model for Migration	
Example 24.10	Treatment Effects on Earnings	893
Example 24.11	Doctor Visits and Insurance	896
CHAPTER 25	Models for Event Counts and Duration	906
Example 25.1	Count Data Models for Doctor Visits	914
Example 25.2	Panel Data Models for Doctor Visits	920
Example 25.3	A Split Population Model for Major Derogatory Reports	924
Example 25.4	Survival Models for Strike Duration	941
Section 25.5.2	Censoring in the Tobit and Poisson Regression Models	925
APPENDIX C	Estimation and Inference	1019
Example C.1	Descriptive Statistics for a Random Sample	1022
Example C.2	Kernel Density Estimator for the Income Data	1023
Example C.3	Sampling Distribution of a Sample Mean	1025

Example C.4	Sampling Distribution of the Sample Minimum	1025
Example C.5	Mean Squared Error of the Sample Variance	1029
Example C.6	Likelihood Functions for Exponential and Normal Distributions	1030
Example C.7	Variance Bound for the Poisson Distribution	1031
Example C.8	Confidence Intervals for the Normal Mean	1033
Example C.9	Estimated Confidence Intervals for a Normal Mean and Variance	1034
Example C.10	Testing a Hypothesis About a Mean	1035
Example C.11	Consistent Test About a Mean	1037
Example C.12	Testing a Hypothesis About a Mean with a Confidence Interval	1037
Example C.13	One-Sided Test About a Mean	1038

APPENDIX D Large-Sample Distribution Theory 1038

Example D.1	Mean Square Convergence of the Sample Minimum in Exponential Sampling	1040
Example D.2	Estimating a Function of the Mean	1042
Example D.3	Probability Limit of a Function of x and s^2	1046
Example D.4	Limiting Distribution of t_n^{-1}	1048
Example D.5	The F Distribution	1050
Example D.6	The Lindeberg-Levy Central Limit Theorem	1052
Example D.7	Asymptotic Distribution of the Mean of an Exponential Sample	1057
Example D.8	Asymptotic Inefficiency of the Median in Normal Sampling	1058
Example D.9	Asymptotic Distribution of a Function of Two Estimators	1058
Example D.10	Asymptotic Moments of the Sample Variance	1060

APPENDIX E Computation and Optimization 1061

Section E4.1	Function of One Parameter	1078
Section E4.2	Function of Two Parameters: The Gamma Distribution	1079
Section E4.3	A Concentrated Log-Likelihood Function	1080
