CONTENTS

List of figures.....	xi
List of tables	xiii
Preface	xv
Chapter 1 - Introduction	1
1.1 Background and aims of the monograph	1
1.2 Empirical models in discrete time.....	7
1.2.1 The basic models.....	7
1.2.2 Extensions.....	8
1.2.3 Volatility asymmetries: ramifications.....	11
1.2.4 Diffusions as ARCH models approximations.....	14
1.3 Theoretical issues.....	16
1.3.1 European option pricing.....	16
1.3.2 The term structure of interest rates.....	20
1.4 Statistical inference.....	23
1.5 Plan.....	29
Chapter 2 - Continuous time behavior of non linear ARCH models.....	31
2.1 Introduction.....	31
2.2 Approximation results for a general class of non linear ARCH models...	31
2.3 Interpretation of the moment conditions.....	36
2.4 Effectiveness of ARCH as diffusion approximations of theoretical models.....	37
2.5 Limiting behavior of the error process.....	40
2.6 Continuous time behavior of the volatility switching models.....	44
2.6.1 Some properties in discrete time.....	44
2.6.2 Convergence issues.....	45
2.6.3 Invariant measures.....	46
Appendix A: proofs on convergence issues.....	48
Appendix B: proofs on distributional issues.....	52
Appendix C.....	55

Chapter 3 - Continuous time stochastic volatility option pricing: foundational issues	57
3.1 Introduction	57
3.2 The reference model	59
3.2.1 Primitives	59
3.2.2 Incompleteness issues	63
3.2.3 Models completed by non-productive assets	65
3.2.4 Partial hedging strategies in incomplete markets: a basic example	66
3.3 Applications to stochastic volatility	70
3.3.1 Feynman-Kac representation of the solution(s)	71
3.3.2 Inspecting the mechanism: hedging cost processes and decomposition formulae	74
3.4 On mean self-financing strategies and the minimal martingale measure	75
Appendix: relative entropy and the minimal martingale measure	80
Chapter 4 - Models of the term structure with stochastic volatility	81
4.1 Introduction	81
4.2 From the one factor model to the modelling of conditional heteroskedasticity	83
4.3 Searching for affinity	87
4.4 Early equilibrium-based models	90
4.5 A class of equilibrium models of the term structure with stochastic volatility	91
4.5.1 Preliminary optimality results	92
4.5.2 The construction of the model	92
4.6 Concluding remarks: taking account of nonlinearities	96
Chapter 5 - Formulating, solving and estimating models of the term structure using ARCH models as diffusion approximations	99
5.1 Introduction	99
5.2 Specification of the theoretical models	100
5.3 Econometric strategy	102
5.4 The pure numerical solution of the theoretical models	109
5.4.1 The compact state-space case	109
5.4.2 The general case	112
5.4.3 Limiting and transversality conditions	113
5.5 An illustrative example	115
Appendix: a solution method based on the approach of iterated approximations	119
5A.1 Assumptions	119
5A.2 Generalities	120

5A.3 An iterated approximation result	123
References	129
Index	143
