r CONTENTS

Preface	ix	3 Static Optimization	103
1 Topics in Linear Algebra	1	3.1 Extreme Points	104
1.1 Review of Basic Linear Algebra	2	3.2 Local Extreme Points	110
1.2 Linear Independence	7	3.3 Equality Constraints: The Lagrange Problem	115
1.3 The Rank of a Matrix	11	3.4 Local Second-Order Conditions	125
1.4 Main Results on Linear Systems	14	3.5 Inequality Constraints: Nonlinear Programming	129
1.5 Eigenvalues	19	3.6 Sufficient Conditions	135
1.6 Diagonalization	25	3.7 Comparative Statics	139
1.7 Quadratic Forms	28	3.8 Nonnegativity Constraints	143
1.8 Quadratic Forms with Linear Constraints	35	3.9 Concave Programming	148
1.9 Partitioned Matrices and Their Inverses	37	3.10 Precise Comparative Statics Results	150
2 Multivariable Calculus	43	3.11 Existence of Lagrange Multipliers	153
2.1 Gradients and Directional Derivatives	44	4 Topics in Integration	157
2.2 Convex Sets	50	4.1 Review of One-Variable Integration	157
2.3 Concave and Convex Functions I	53	4.2 Leibniz's Formula	159
2.4 Concave and Convex Functions II	63	4.3 The Gamma Function	164
2.5 Quasiconcave and Quasiconvex Functions	68	4.4 Multiple Integrals over Product Domains	166
2.6 Taylor's Formula	77	4.5 Double Integrals over General Domains	171
2.7 Implicit and Inverse Function Theorems	80	4.6 The Multiple Riemann Integral $\cdot \cdot j$	175
2.8 Degrees of Freedom and Functional Dependence	89	4.7 Change of Variables ;	178
2.9 Differentiability	93	4.8 Generalized Double Integrals	186
2.10 Existence and Uniqueness of Solutions of Systems of Equations	98		

5 Differential Equations I: First-Order Equations in One Variable	189	9 Control Theory: Basic Techniques	305
5.1 Introduction	190	9.1 The Basic Problem.	306
5.2 The Direction is Given: Find the Path!	193	9.2 A Simple Case	308
5.3 Separable Equations	194	9.3 Regularity Conditions	312
5.4 First-Order Linear Equations	200	9.4 The Standard Problem	314
5.5 Exact Equations and Integrating Factors	206	9.5 The Maximum Principle and the Calculus of Variations	322
5.6 Transformation of Variables	208	9.6 Adjoint Variables as Shadow Prices	324
5.7 Qualitative Theory and Stability	211	9.7 Sufficient Conditions	330
5.8 Existence and Uniqueness	217	9.8 Variable Final Time	336
		9.9 Current Value Formulations	338
6 Differential Equations II: Second-Order Equations and Systems in the Plane	223	9.10 Scrap Values	341
6.1 Introduction	223	9.11 Infinite Horizon	348
6.2 Linear Differential Equations	226	9.12. Phase Diagrams	353
6.3 Constant Coefficients	228	10 Control Theory with Many Variables	359
6.4 Stability for Linear Equations	235	10.1 Several Control and State Variables	360
6.5 Simultaneous Equations in the Plane	237	10.2 Some Examples	366
6.6 Equilibrium Points for Linear Systems	243	10.3 Infinite Horizon	370
6.7 Phase Plane Analysis	246	10.4 Existence Theorems and Sensitivity	373
6.8 Stability for Nonlinear Systems-	251	10.5 A Heuristic Proof of the Maximum Principle	377
6.9 Saddle Points	255	10.6 Mixed Constraints	380
7 Differential Equations III: Higher-Order Equations	259	10.7 Pure State Constraints	383
7.1 Linear Differential Equations	259	10.8 Generalizations	386
7.2 The Constant Coefficients Case	263	11 Difference Equations	389
7.3 Stability of Linear Differential Equations	266	11.1 First-Order Difference Equations	390
7.4 Systems of Differential Equations	269	11.2 Economic Applications	396
7.5 Stability for Nonlinear Systems	273	11.3 Second-Order Difference Equations	401
7.6 Qualitative Theory	278	11.4 Linear Equations with Constant Coefficients	404
7.7 A Glimpse at Partial Differential Equations	280	11.5 Higher-Order Equations	410
8 Calculus of Variations	287	11.6 Systems of Difference Equations	415
8.1 The Simplest Problem	288	11.7 Stability of Nonlinear Difference Equations	419
8.2 The Euler Equation	290	12 Discrete Time Optimization	423
8.3 Why the Euler Equation is Necessary	293	12.1 Dynamic Programming	424
8.4 Optimal Savings	298	12.2 The Euler Equation	433
8.5 More General Terminal Conditions	300	12.3 Infinite Horizon	435

12.4 The Maximum Principle	441	Appendix A	
12.5 More Variables	444	Sets, Completeness, and	;
12.6 Stochastic Optimization	448	Convergence	" 525
12.7 Infinite Horizon Stationary Problems	458	A. 1 Sets and Functions	,525;
		A.2 Least Upper Bound Principle	530
13 Topology and Separation	465	A.3 Sequences of Real Numbers	533
13.1 Point Set Topology in W	465	A.4 Infimum and Supremum of Functions	541
13.2 Topology and Convergence	471	Appendix B	
13.3' Continuous Functions	475	Trigonometric Functions	545
13.4 Maximum Theorems'	481	B.I Basic Definitions and Results	545
13.5 Convex Sets	486	B.2 Differentiating Trigonometric Functions	551
13.6 Separation Theorems	491	B.3 Complex Numbers	555
13.7 Productive Economies and Frobenius's Theorem	495	Answers	559
.14 Correspondences and Fixed Points	499	References	605
14.1 Correspondences	500	Index	609
14.2 A General Maximum Theorem	509		
14.3 Fixed Points for Contraction Mappings	513		
14.4 Brouwer's and Kakutani's Fixed Point Theorems	516		
14.5 Equilibrium in a Pure Exchange Economy	521
