New York London

Contents

Preface.....	xi
1 Introduction.....	1
1.1 Introduction.....	1
1.2 Type I Error, Type II Error, and Power.....	2
1.3 Multiple Statistical Tests and the Probability of Spurious Results.....	5
1.4 Statistical Significance versus Practical Significance.....	8
1.5 Outliers.....	10
1.6 Research Examples for Some Analyses Considered in This-Text.....	15
1.7 The SAS and SPSS Statistical Packages.....	17
1.8 SPSS for Windows—Releases 15.0 and 16.0.....	26
1.9 Data Files.....	27
1.10 Data Editing.....	28
1.11 SPSS Output Navigator.....	34
1.12 Data Sets on the Internet.....	36
1.13 Importing a Data Set into the Syntax Window of SPSS.....	36
1.14 Some Issues Unique to Multivariate Analysis.....	37
1.15 Data Collection and Integrity.....	38
1.16 Nonresponse in Survey Research.....	39
1.17 Internal and External Validity.....	39
1.18 Conflict of Interest.....	40
1.19 Summary.....	41
1.20 Exercises.....	41
2 Matrix Algebra.....	43
2.1 Introduction.....	43
2.2 Addition, Subtraction, and Multiplication of a Matrix by a Scalar.....	46
2.3 Obtaining the Matrix of Variances and Covariances.....	49
2.4 Determinant of a Matrix.....	50
2.5 Inverse of a Matrix.....	54
2.6 SPSS Matrix Procedure.....	57
2.7 SAS IML Procedure.....	59
2.8 Summary.....	59
2.9 Exercises.....	60
3 Multiple Regression.....	63
3.1 Introduction.....	63
3.2 Simple Regression.....	64
3.3 Multiple Regression for Two Predictors: Matrix Formulation.....	69
3.4 Mathematical Maximization Nature of Least Squares Regression.....	71
3.5 Breakdown of Sum of Squares and <i>F</i> Test for Multiple Correlation.....	71
3.6 Relationship of Simple Correlations to Multiple Correlation.....	73
3.7 Multicollinearity.....	74
3.8 Model Selection.....	75

3.9	Two Computer Examples.....	80
3.10	Checking Assumptions for the Regression Model.....	90
3.11	Model Validation.....	93
3.12	Importance of the Order of the Predictors.....	98
3.13	Other Important Issues.....	100
3.14	Outliers and Influential Data Points.....	103
3.15	Further Discussion of the Two Computer Examples.....	113
3.16	Sample Size Determination for a Reliable Prediction Equation.....	117
3.17	Logistic Regression.....	120
3.18	Other Types of Regression Analysis.....	127
3.19	Multivariate Regression.....	128
3.20	Summary.....	131
3.21	Exercises.....	132
Two-Group Multivariate Analysis of Variance.....		145
4.1	Introduction.....	145
4.2	Four Statistical Reasons for Preferring a Multivariate Analysis.....	146
4.3	The Multivariate Test Statistic as a Generalization of Univariate F	147
4.4	Numerical Calculations for a Two-Group Problem.....	148
4.5	Three Post Hoc Procedures.....	152
4.6	SAS and SPSS Control Lines for Sample Problem and Selected Printout.....	154
4.7	Multivariate Significance But No Univariate Significance.....	156
4.8	Multivariate Regression Analysis for the Sample Problem.....	158
4.9	Power Analysis.....	162
4.10	Ways of Improving Power.....	164
4.11	Power Estimation on SPSS MANOVA.....	166
4.12	Multivariate Estimation of Power.....	166
4.13	Summary.....	170
4.14	Exercises.....	171
K-Group MANOVA: <i>A Priori</i> and <i>Post Hoc</i> Procedures.....		177
5.1	Introduction.....	177
5.2	Multivariate Regression Analysis for a Sample Problem.....	177
5.3	Traditional Multivariate Analysis of Variance.....	178
5.4	Multivariate Analysis of Variance for Sample Data.....	181
5.5	<i>Post Hoc</i> Procedures.....	184
5.6	The Tukey Procedure.....	189
5.7	Planned Comparisons.....	192
5.8	Test Statistics for Planned Comparisons.....	194
5.9	Multivariate Planned Comparisons on SPSS MANOVA.....	197
5.10	Correlated Contrasts.....	202
5.11	Studies Using Multivariate Planned Comparisons.....	204
5.12	Stepdown Analysis.....	206
5.13	Other Multivariate Test Statistics.....	207
5.14	How Many Dependent Variables for a Manova?.....	208
5.15	Power Analysis— <i>A Priori</i> Determination of Sample Size.....	209
5.16	Summary.....	210
5.17	Exercises.....	211

Assumptions in MANOVA	217
6.1 Introduction.....	217
6.2 Anova and Manova Assumptions.....	217
6.3 Independence Assumption.....	218
6.4 What Should Be Done with Correlated Observations?.....	219
6.5 Normality Assumption.....	221
6.6 Multivariate Normality.....	222
6.7 Assessing Univariate Normality.....	223
6.8 Homogeneity of Variance Assumption.....	227
6.9 Homogeneity of the Covariance Matrices.....	228
6.10 Summary.....	234
Appendix 6.1: Analyzing Correlated Observations.....	236
Appendix 6.2: Multivariate Test Statistics for Unequal Covariance Matrices.....	239
Exercises.....	241
Discriminant Analysis	245
7.1 Introduction.....	245
7.2 Descriptive Discriminant Analysis.....	245
7.3 Significance Tests.....	247
7.4 Interpreting the Discriminant Functions.....	248
7.5 Graphing the Groups in the Discriminant Plane.....	248
7.6 Rotation of the Discriminant Functions.....	253
7.7 Stepwise Discriminant Analysis.....	254
7.8 Two Other Studies That Used Discriminant Analysis.....	254
7.9 The Classification Problem.....	258
7.10 Linear versus Quadratic Classification Rule.....	265
7.11 Characteristics of a Good Classification Procedure.....	265
7.12 Summary.....	268
Exercises.....	269
Factorial Analysis of Variance	271
8.1 Introduction.....	271
8.2 Advantages of a Two-Way Design.....	271
8.3 Univariate Factorial Analysis.....	273
8.4 Factorial Multivariate Analysis of Variance.....	280
8.5 Weighting of the Cell Means.....	281
8.6 Three-Way Manova.....	283
8.7 Summary.....	284
Exercises.....	285
Analysis of Covariance	287
9.1 Introduction.....	287
9.2 Purposes of Covariance.....	288
9.3 Adjustment of Posttest Means and Reduction of Error Variance.....	289
9.4 Choice of Covariates.....	292
9.5 Assumptions in Analysis of Covariance.....	293
9.6 Use of ANCOVA with Intact Groups.....	296
9.7 Alternative Analyses for Pretest-Posttest Designs.....	297

9.8	Error Reduction and Adjustment of Posttest Means for Several Covariates.....	299
9.9	MANCOVA—Several Dependent Variables and Several Covariates.....	299
9.10	Testing the Assumption of Homogeneous Hyperplanes on SPSS.....	300
9.11	Two Computer Examples.....	301
9.12	Bryant-Paulson Simultaneous Test Procedure.....	308
9.13	Summary.....	310
	Exercises.....	310
10	Stepdown Analysis.....	315
10.1	Introduction.....	315
10.2	Four Appropriate Situations for Stepdown Analysis.....	315
10.3	Controlling on Overall Type I Error.....	316
10.4	Stepdown F's for Two Groups.....	317
10.5	Comparison of Interpretation of Stepdown F's versus Univariate F's ¹⁰	319
10.6	Stepdown F's for <i>K</i> Groups—Effect of within and between Correlations.....	321
10.7	Summary.....	322
11	Exploratory and Confirmatory Factor Analysis.....	325
11.1	Introduction.....	325
11.2	Exploratory Factor Analysis.....	326
11.3	Three Uses for Components as a Variable Reducing Scheme.....	327
11.4	Criteria for Deciding on How Many Components to Retain.....	328
11.5	Increasing Interpretability of Factors by Rotation.....	330
11.6	What Loadings Should Be Used for Interpretation?.....	331
11.7	Sample Size and Reliable Factors.....	333
11.8	Four Computer Examples.....	333
11.9	The Community Issue.....	343
11.10	A Few Concluding Comments.....	344
11.11	Exploratory and Confirmatory Factor Analysis.....	345
11.12	PRELIS.....	348
11.13	A LISREL Example Comparing Two <i>a priori</i> Models.....	352
11.14	Identification.....	358
11.15	Estimation.....	359
11.16	Assessment of Model Fit.....	360
11.17	Model Modification.....	364
11.18	LISREL 8 Example.....	367
11.19	EQS Example.....	368
11.20	Some Caveats Regarding Structural Equation Modeling.....	377
11.21	Summary.....	380
11.22	Exercises.....	381
12	Canonical Correlation.....	395
12.1	Introduction.....	395
12.2	The Nature of Canonical Correlation.....	396
12.3	Significance Tests.....	397
12.4	Interpreting the Canonical Variates.....	398
12.5	Computer Example Using SAS CANCORR.....	399
12.6	A Study That Used Canonical Correlation.....	401

12.7	Using SAS for Canonical Correlation on Two Sets of Factor Scores.....	403
12.8	The Redundancy Index of Stewart and Love.....	405
12.9	Rotation of Canonical Variates.....	406
12.10	Obtaining More Reliable Canonical Variates.....	407
12.11	Summary.....	408
12.12	Exercises.....	409
13	Repeated-Measures Analysis.....	413
13.1	Introduction.....	413
13.2	Single-Group Repeated Measures.....	416
13.3	The Multivariate Test Statistic for Repeated Measures.....	418
13.4	Assumptions in Repeated-Measures Analysis.....	420
13.5	Computer Analysis of the Drug Data.....	422
13.6	<i>Post Hoc</i> Procedures in Repeated-Measures Analysis.....	425
13.7	Should We Use the Univariate or Multivariate Approach?.....	427
13.8	Sample Size for Power = .80 in Single-Sample Case.....	429
13.9	Multivariate Matched Pairs Analysis.....	429
13.10	One Between and One within Factor—A Trend Analysis.....	432
13.11	<i>Post Hoc</i> Procedures for the One Between and One within Design.....	436
13.12	One Between and Two Within Factors.....	438
13.13	Two Between and One Within Factors.....	440
13.14	Two Between and Two Within Factors.....	446
13.15	Totally Within Designs.....	447
13.16	Planned Comparisons in Repeated-Measures Designs.....	449
13.17	Profile Analysis.....	451
13.18	Doubly Multivariate Repeated-Measures Designs.....	455
13.19	Summary.....	456
13.20	Exercises.....	457
14	Categorical Data Analysis: The Log Linear Model.....	463
14.1	Introduction.....	463
14.2	Sampling Distributions: Binomial and Multinomial.....	465
14.3	Two-Way Chi-Square-Log Linear Formulation.....	468
14.4	Three-Way Tables.....	471
14.5	Model Selection.....	479
14.6	Collapsibility.....	481
14.7	The Odds (Cross-Product) Ratio.....	484
14.8	Normed Fit Index and Residual Analysis.....	485
14.9	Residual Analysis.....	486
14.10	Cross-Validation.....	486
14.11	Higher Dimensional Tables—Model Selection.....	488
14.12	Contrasts for the Log Linear Model.....	493
14.13	Log Linear Analysis for Ordinal Data.....	496
14.14	Sampling and Structural (Fixed) Zeros.....	496
14.15	Summary.....	496
14.16	Exercises.....	497
	Appendix 14.1: Log Linear Analysis Using Windows for Survey Data.....	501

15 Hierarchical Linear Modeling	505
<i>Natasha Beretvas</i>	
15.1 Introduction.....	505
15.2 Problems Using Single-Level Analyses of Multilevel Data.....	506
15.3 Formulation of the Multilevel Model.....	507
15.4 Two-Level Model—General Formulation.....	507
15.5 HLM6 Software.....	510
15.6 Two-Level Example—Student and Classroom Data.....	511
15.7 HLM Software Output.....	518
15.8 Adding Level-One Predictors to the HLM.....	520
15.9 Adding a Second Level-One Predictor to the Level-One Equation.....	525
15.10 Addition of a Level-Two Predictor to a Two-Level HLM.....	527
15.11 Evaluating the Efficacy of a Treatment.....	529
15.12 Summary.....	535
16 Structural Equation Modeling	537
<i>Leandre R. Fabrigar and Duane T. Wegencr</i>	
16.1 Introduction.....	537
16.2 Introductory Concepts.....	537
16.3 The Mathematical Representation of Structural Equation Models.....	540
16.4 Model Specification.....	544
16.5 Model Identification.....	544
16.6 Specifying Alternative Models.....	547
16.7 Specifying Multi-Sample Models.....	553
16.8 Specifying Models in LISREL.....	554
16.9 Specifying Models in EQS.....	560
16.10 Model Fitting.....	562
16.11 Model Evaluation and Modification.....	566
16.12 Model Parsimony.....	572
16.13 Model Modification.....	572
16.14 LISREL Example of Model Evaluation.....	573
16.15 EQS Example of Model Evaluation.....	576
16.16 Comparisons with Alternative Models in Model Evaluation.....	577
16.17 Summary.....	581
