A BALKEMA BOOK

Table of contents

About the book series	vii
Editorial board	ix
Foreword by Caio Koch-Weser	xxv
Foreword by Mark Z. Jacobson	xxvii
About the author	xxix
Acknowledgements	xxxii
1 Introduction	1
1.1 The purpose of this book	1
1.2 Renewable energy as a jobs miracle	2
1.3 Renewable energy is not an economic burden	3
1.4 Renewable energy does not increase prices for energy customers	4
1.5 Renewable energy as the most effective climate protection measure	4
1.6 Renewable energy can grow much faster than generally assumed	5
1.7 Success of biological agriculture in Germany	7
1.8 Success of green chemistry in Germany	7
1.9 Poverty reduction with renewable energy and biological agriculture	8
2 The crisis of the fossil-atomic age is accelerating dramatically	11
2.1 The disasters are increasing as a result of global warming	11
2.2 Fossil fuel raw materials cause more than just climate problems	12
2.2.1 From the 1973 oil crisis to the current consumption levels	13
2.2.2 The new dimension of the oil shortage	13
2.2.3 Security problems caused by oil dependency	14
2.2.4 Development of oil production	15
2.2.5 The economic interest of the oil companies	16
2.3 Fukushima has once again revealed the uncontrollability of nuclear energy	17
2.4 Global warming speeds up dramatically: tipping points and political failure	18
2.4.1 Global warming and its consequences advance much faster and more dramatically than formerly supposed	18
2.4.2 The failure of the political forces and the political disregard for the tipping points	21
2.4.3 For many years there have been the same political climate protection requirements	22
3 Low carbon: pseudo-solutions for climate protection	23
3.1 Carbon capture and storage (CCS)	24
3.2 Nuclear energy	26
3.2.1 Nuclear fission	26
3.2.2 Nuclear fusion	27
3.3 Industrial, intensive agriculture	29

3.4	Transport systems with more efficient use of fossil fuels	*	31
3.5	Geoengineering		34
4	Cooling of the Earth is possible: in some decades 330 ppm CO ₂ can be achieved		37
4.1	First pillar: zero emission		39
4.1.1	What is zero emission? The present-day situation of greenhouse gas emissions and concentrations		39
4.1.2	Where do emissions come from and how can they be avoided?		40
4.1.3	Zero emission of power systems with 100% renewable energy is feasible in a few decades		42
4.1.4	Energy conservation as an important accelerator for the shift to 100% renewable energies		43
4.1.5	Stones of carbon fiber and textile reinforced concrete instead of steel reinforced concrete		47
4.2	Second pillar: carbon removal from the atmosphere		49
4.2.1	The carbon purification of the atmosphere is economically and technologically feasible		49
4.2.2	Grassland management and biological agricultural methods		50
4.2.3	Greening the deserts		51
4.2.4	Hydrothermal carbonization (HTC)		52
4.2.5	Reforestation		53
4.2.6	Pure plant oils from sustainable cultivation and the global food challenge		56
5	Policy measures for cooling the Earth		61
5.1	The necessity and effect of state regulations to redirect global financial flows		61
5.2	Demand-oriented innovation policies break the vicious circle of obstacles to innovation		65
5.3	The EEC as an example of an effective state regulation to divert private cash flows into climate protection		66
5.3.1	The success of the German EEG		67
5.3.2	Regarding the discussion on the fast PV compensation reductions in Germany		68
5.3.3	Unjustified electricity price increases		69
5.3.4	First tentative beginnings of the feed-in compensation in Germany		69
5.3.5	Regulating the interaction of private actors		70
5.3.6	Discussion: state regulation <i>versus</i> "free market"		71
5.3.7	Quota and tendering models		72
5.3.8	Bureaucracy		74
5.3.9	Maximum targets and quotas as extension brake		75
5.3.10	Benefits of the independence from tax money		76
5.3.11	Level of compensation		77
5.3.12	Compensation period and depression		79
5.3.13	Priority access to the grid		80
5.3.14	Political stability		81
5.3.15	Period of validity of the feed-in law		81
5.3.16	No restriction on the market volume (no cap!)		82
5.3.17	Stakeholders		82
	5.3.17.1 Electricity customers		82
	5.3.17.2 Electric power companies		83
	5.3.17.3 Legislator		84
	5.3.17.4 Conservationists		84

5.4	The permission problems	*	85
5.4.1	Approval of the compensation		85
5.4.2	Authorization of grid access		85
5.4.3	Permission for constructing the plant		85
5.5	State regulations required for effective climate protection		87
5.5.1	Laws for feed-in compensations: following the German role model of the Renewable Energy Sources Act (EEG)		88
5.5.2	Creation of fiscal and other financial benefits for climate protection technologies		88
5.5.3	Direct subsidies from tax revenues for climate protection technologies and measures		91
5.5.4	Creation of public funds for supporting financing of climate change mitigation		93
5.5.5	Increase and reorientation of research expenditures for all climate protection technologies and measures		95
5.5.6	Organization of global knowledge transfer; international institutions		98
5.5.7	Creation of a scientific, educational and training campaign in all educational institutions, such as schools and universities		102
5.5.8	Creation of an awareness campaign for climate protection measures for the general public and companies		104
5.5.9	Anchor climate protection in the constitution: climate protection as a political cross-cutting issue, ministries for climate protection, climate protection legislation		105
5.5.10	Public procurement as role model for climate protection		107
5.5.11	Creating privileged permits, such as buildings in the uninhabited areas for renewable energy or HTC techniques		109
5.5.12	Creation of privileges and rewards for the use of climate protection technologies and pioneer behavior		110
5.5.13	Screening of laws and regulations regarding barriers for the investments in climate protection technologies, as well as the necessary amendments to improve climate protection		111
5.5.14	Regulatory measures		112
5.5.15	Financial market regulations for promoting investment in climate protection technologies		113
5.5.16	Research financing		116
5.5.17	Venture capital		116
5.5.18	Financing entrepreneurial growth through developing banks		116
5.5.19	Reducing transaction costs for direct investments		117
5.5.20	Ecological investments		118
5.5.21	Public-controlled fund for the reserves of the nuclear industry		119
5.5.22	Renewable energy as part of international conflict-solving strategies		120
5.5.23	Policy measures aimed at the abolition of privileges of climate-damaging investments		121
5.6	Policy measures with little or nil effectiveness for climate protection		124
6	The key role of the financial sector as political climate protection motor		127
