CONTENTS

1 / THE FORECASTING PERSPECTIVE 1

1/1 Why forecast? 2

1/2 An overview of forecasting techniques 6

1/2/1 Explanatory versus time series forecasting 10

1/2/2 Qualitative forecasting 12

1/3 The basic steps in a forecasting task 13

References and selected bibliography 17

Exercises 19

2 / BASIC FORECASTING TOOLS 20

2/1 Time series and cross-sectional data 21

2/2 Graphical summaries 23

2/2/1 Time plots and time series patterns 24

2/2/2 Seasonal plots 26

2/2/3 Scatterplots 27

2/3 Numerical summaries 28

2/3/1 Univariate statistics 29

2/3/2 Bivariate statistics 34

2/3/3 Autocorrelation 38

2/4 Measuring forecast accuracy 41

2/4/1 Standard statistical measures 42

2/4/2 Out-of-sample accuracy measurement 45

2/4/3 Comparing forecast methods 46

2/4/4 Theil's U-statistic 48

2/4/5 ACF of forecast error 50

2/5 Prediction intervals 52

2/6 Least squares estimates 54

2/6/1 Discovering and describing relationships 59

2/7 Transformations and adjustments 63

2/7/1 Mathematical transformations 63

2/7/2 Calendar adjustments 67

2/7/3 Adjustments for inflation and population changes 70

Appendices 71

2-A Notation for quantitative forecasting 71

2-B Summation sign Σ 72

References and selected bibliography 74

Exercises 76

3 / TIME SERIES DECOMPOSITION 81

3/1 Principles of decomposition 84

3/1/1 Decomposition models 84

3/1/2 Decomposition graphics 87

3/1/3 Seasonal adjustment 88

3/2 Moving averages 89

3/2/1 Simple moving averages 89

3/2/2 Centered moving averages 94

3/2/3 Double moving averages 98

3/2/4 Weighted moving averages 98

3/3 Local regression smoothing 101

3/3/1 Loess 104

3/4 Classical decomposition 106

3/4/1 Additive decomposition 107

3/4/2 Multiplicative decomposition 109

3/4/3 Variations on classical decomposition 112

3/5 Census Bureau methods 113
3/5/1 First iteration 114
3/5/2 Later iterations 118
3/5/3 Extensions to X-12-ARIMA 119

3/6 STL decomposition 121
3/6/1 Inner loop 122
3/6/2 Outer loop 123
3/6/3 Choosing the STL parameters 124
3/6/4 Comparing STL with X-12-ARIMA 124

3/7 Forecasting and decomposition 125

References and selected bibliography 127

Exercises 130

4 / EXPONENTIAL SMOOTHING METHODS 135

4/1 The forecasting scenario 138

4/2 Averaging methods 141
4/2/1 The mean 141
4/2/2 Moving averages 142

4/3 Exponential smoothing methods 147
4/3/1 Single exponential smoothing 147
4/3/2 Single exponential smoothing: an adaptive approach 155
4/3/3 Holt's linear method 158
4/3/4 Holt-Winters' trend and seasonality method 161
4/3/5 Exponential smoothing: Pegels' classification 169

4/4 A comparison of methods 171

4/5 General aspects of smoothing methods 174
4/5/1 Initialization 174
4/5/2 Optimization 176
4/5/3 Prediction intervals 177

References and selected bibliography 179

Exercises 181

5 / SIMPLE REGRESSION 185

5/1 Regression methods 186

5/2 Simple regression 187
5/2/1 Least squares estimation 188
5/2/2 The correlation coefficient 193
5/2/3 Cautions in using correlation 196
5/2/4 Simple regression and the correlation coefficient 198
5/2/5 Residuals, outliers, and influential observations 203
5/2/6 Correlation and causation 208

5/3 Inference and forecasting with simple regression 208
5/3/1 Regression as statistical modeling 209
5/3/2 The *F*-test for overall significance 211
5/3/3 Confidence intervals for individual coefficients 215
5/3/4 *t*-tests for individual coefficients 217
5/3/5 Forecasting using the simple regression model 218

5/4 Non-linear relationships 221
5/4/1 Non-linearity in the parameters 222
5/4/2 Using logarithms to form linear models 224
5/4/3 Local regression 224

Appendixes 228
5-A Determining the values of *a* and *b* 228

References and selected bibliography 230

Exercises 231

6 / MULTIPLE REGRESSION 240

6/1 Introduction to multiple linear regression 241
6/1/1 Multiple regression model: theory and practice 248
6//1/2 Solving for the regression coefficients 250
6/1/3 Multiple regression and the coefficient of determination 251
6/1/4 The *F*-test for overall significance 252
6/1/5 Individual coefficients: confidence intervals and *t*-tests 255
6/1/6 The assumptions behind multiple linear regression models 259

6/2 Regression with time series 263
6/2/1 Checking independence of residuals 265
6/2/2 Time-related explanatory variables 269

6/3 Selecting variables 274
6/3/1 The long list 276
6/3/2 The short list 277
6/3/3 Best subsets regression 279
6/3/4 Stepwise regression 285

6/4 Multicollinearity 287
6/4/1 Multicollinearity when there are two regressors 289
6/4/2 Multicollinearity when there are more than two regressors 289

6/5 Multiple regression and forecasting 291
6/5/1 Example: cross-sectional regression and forecasting 292
6/5/2 Example: time series regression and forecasting 294
6/5/3 Recapitulation 298

6/6 Econometric models 299
6/6/1 The basis of econometric modeling 299
6/6/2 The advantages and drawbacks of econometric methods 301

Appendixes 303
6-A The Durbin-Watson statistic 303

References and selected bibliography 305

Exercises 306

7 / THE BOX-JENKINS METHODOLOGY FOR ARIMA MODELS 311

7/1 Examining correlations in times series data 313
7/1/1 The autocorrelation function 313
7/1/2 A white noise model 317
7/1/3 The sampling distribution of autocorrelations 317
7/1/4 Portmanteau tests 318
7/1/5 The partial autocorrelation coefficient 320
7/1/6 Recognizing seasonality in a time series 322
7/1/7 Example: Pigs slaughtered 322

7/2 Examining stationarity of time series data 324
7/2/1 Removing non-stationarity in a time series 326
7/2/2 A random walk model 329
7/2/3 Tests for statationarity 329
7/2/4 Seasonal differencing 331
7/2/5 Backshift notion 334

7/3 ARIMA models for times series data 335
7/3/1 An autoregressive model of order one 337

7/3/2 A moving average model of order one 339
7/3/3 Higher-order autoregressive models 339
7/3/4 Higher-order moving average models 342
7/3/5 Mixtures: ARIMA models 344
7/3/6 Mixtures: ARIMA models 345
7/3/7 Seasonality and ARIMA models 346

7/4 Identification 347
7/4/1 Example 1: A non-seasonal time series 349
7/4/2 Example 2: A seasonal time series 352
7/4/3 Example 3: A seasonal time series needing transformation 354
7/4/4 Recapitulation 357

7/5 Estimating the parameters 358

7/6 Identification revisited 360
7/6/1 Example 1: Internet usage 362
7/6/2 Example 2: Sales of printing/writing paper 362

7/7 Diagnostic checking 364

7/8 Forecasting with ARIMA models 366
7/8/1 Point forecasts 366
7/8/2 Out-of-sample forecasting 370
7/8/3 The effect of differencing on forecasts 371
7/8/4 ARIMA models used in time series decomposition 372
7/8/5 Equivalances with exponential smoothing models 373

References and selected bibliography 374

Exercises 377

8 / ADVANCED FORECASTING MODELS 388

8/1 Regression with ARIMA errors 390
8/1/1 Modeling procedure 391
8/1/2 Example: Japanese motor vehicle production 393
8/1/3 Example: Sales of petroleum and coal products 396
8/1/4 Forecasting 400

8/2 Dynamic regression models 403
8/2/1 Lagged explanatory variables 403
8/2/2 Koyck model 406
8/2/3 The basic forms of the dynamic regression model 407
8/2/4 Selecting the model order 409
8/2/5 Forecasting 413
8/2/6 Example: Housing starts 415

8/3 Intervention analysis 418
8/3/1 Step-based interventions 419
8/3/2 Pulse-based interventions 421
8/3/3 Further reading 422
8/3/4 Intervention models and forecasting 423

8/4 Multivariate autoregressive models 423

8/5 State space models 429
8/5/1 Some forecasting models in state space form 429
8/5/2 State space forecasting 431
8/5/3 The value of state space models 433

8/6 Non-linear models 433

8/7 Neural network forecasting 435

References and selected bibliography 440

Exercises 444

9 / FORECASTING THE LONG-TERM 451

9/1 Cycles versus long-term trends: forecasting copper prices 452
9/1/1 Forecasting IBM's sales 457

9/2 Long-term mega economic trends 459
9/2/1 Cycles of various durations and depths 461
9/2/2 Implications of extrapolating long-term trends 464

9/3 Analogies 466
9/3/1 The Information versus the Industrial Revolution 467
9/3/2 Five major inventions of the Industrial Revolution and their analogs 469

9/4 Scenario building 472
9/4/1 Businesses: gaining and/or maintaining competitive advantages 472
9/4/2 Jobs, work, and leisure time 475
9/4/3 Physical versus tele-interactions: extent and speed of acceptance 476

References and selected bibliography 478

Exercises 480

10 / JUDGMENTAL FORECASTING AND ADJUSTMENTS 482

10/1 The accuracy of judgmental forecasts 483
10/1/1 The accuracy of forecasts in financial and other markets 484
10/1/2 Non-investment type forecasts 490

10/2 The nature of judgmental biases and limitations 492
10/2/1 Judgmental biases in forecasting 493
10/2/2 Dealing with judgmental biases 496
10/2/3 Conventional wisdom 502

10/3 Combining statistical and judgmental forecasts 503
10/3/1 Arriving at final forecasts during a budget meeting 503

10/4 Conclusion 508

References and selected bibliography 509

Exercises 512

11 / THE USE OF FORECASTING METHODS IN PRACTICE 514

11/1 Surveys among forecasting users 515
11/1/1 Familiarity and satisfaction with major forecasting methods 516
11/1/2 The use of different forecasting methods 520

11/2 Post-sample accuracy: empirical findings 525

11/3 Factors influencing method selection 532

11/4 The combination of forecasts 537
11/4/1 Factors that contribute to making combining work 538
11/4/2 An example of combining 539

References and selected bibliography 543

Exercises 547

12 / IMPLEMENTING FORECASTING: ITS USES, ADVANTAGES, AND LIMITATIONS 549

12/1 What can and cannot be predicted 551
12/1/1 Short-term predictions 553
12/1/2 Medium-term predictions 554
12/1/3 Long-term predictions 557

12/2 Organizational aspects of forecasting 558
12/2/1 Correcting an organization's forecasting problems 561
12/2/2 Types of forecasting problems and their solutions 562

12/3 Extrapolative predictions versus creative insights 567
12/3/1 Hindsight versus foresight 569

12/4 Forecasting in the future 571
12/4/1 Data, information, and forecasts 571
12/4/2 Collective knowledge, experience, and forecasting 572

References and selected bibliography 575

Exercises 576

APPENDIX I / FORECASTING RESOURCES 577

1 Forecasting software 578
1/1 Spreadsheets 578
1/2 Statistics packages 578
1/3 Specialty forecasting packages 579
1/4 Selecting a forecasting package 582

2 Forecasting associations 583

3 Forecasting conferences 585

4 Forecasting journals and newsletters 585

5 Forecasting on the Internet 586

References and selected bibliography 588

APPENDIX II / GLOSSARY OF FORECASTING TERMS 589

APPENDIX III / STATISTICAL TABLES 549

A: Normal probabilities 620
B: Critical values for t-statistic 621
C: Critical values for F-statistic 622
D: Inverse normal table 628
E: Critical values for χ^2 statistic 629
F: Values of the Durbin-Watson statistic 630
G: Normally distributed observations 632
