Contents

Preface ix

Part I

1 Introduction: towards a new paradigm 3

- National planning with immature theories* 4
- Underdevelopment: the historical context* 6
- The spatial characteristics of underdevelopment* 7
- Two circuits* 8
- The lower circuit* 9

2 The two circuits of the urban economy: evolution and characteristics 12

- Historical periods and systems* 14
- Technological modernization and the evolution of the two circuits* 15
- The two circuits: composition* 17
- The two circuits: characteristics* 20
- Three classes – two circuits* 24
- Polarization, not dualism* 25

3 The colonial urban economy: two circuits? 28

- The ghetto and the lower circuit* 29
- Shantytowns and the lower circuit* 30
- The contemporary nature of the two circuits* 31

Part II

4 The upper circuit 37

- The import motive* 37
- Import-substitution industry* 38
- Export industries* 40
- The marginal upper circuit* 45
- Modern retailing* 47
- Foreign capital* 48
- The mediating role of the banks* 51
- The multinational corporation and dependency* 52
- The consequences of dependency* 56

5 The state and the upper circuit 58

Concentration and the monopolies 59

'Creative destruction' for whom? 62

The characteristics and consequences of monopoly power 62

Monopoly in a Third World context 66

Third World industrialization and development policy 67

The State and the upper circuit 70

State bankruptcy, mass poverty and economic backwardness 74

Part III

6 Third World poverty and the lower circuit 79

Unequal wages and the creation of a middle class 80

Non-employment, underemployment and tertiarization 82

Modernization, poverty and the lower circuit 83

7 The nature of lower circuit employment 86

A tertiary sector? 88

The lower circuit and small industry 89

Employment in the lower circuit 90

Lower circuit: entry requirements 92

Small-scale activities 99

Fractionalization of activities 101

8 The financial mechanisms of the lower circuit 110

Dependence on middlemen (wholesalers and transporters) 111

The importance of liquidity in the lower circuit 114

From credit to indebtedness 119

Profit margins 124

Price mechanisms 126

9 Adaptability and rationality in the lower circuit 130

The hypertrophic nature of the lower circuit 130

Lower circuit adaptability to a changing economic climate 131

Productivity, dynamism and rationality 134

The rationality of the lower circuit 136

10 Inter-circuit relations and the parameters of growth 139

Variables specific to each circuit 140

Variables common to both circuits 141

Part IV

11 Monopoly, the state and macrospatial organization 147

The two circuits and geographical analysis: a macrospatial perspective 147,

Complete and partial metropolises 150

Integration and spatial reorganization 155

Regional inequalities and internal colonialism 160

Migration and spatial structure 165

Cumulative concentration and macrocephalous urbanization 169

Metropolises and intermediate cities 172

The marginal upper circuit 173

12 The shared space 175

Industrialization processes and urbanization tendencies 175

<i>The urbanization process and its constituent sub-systems</i>	177
<i>The two circuits and the urban system</i>	187
<i>Two urban circuits and the problem of central place theory</i>	193
<i>The spatial dialectic of the two circuits</i>	197
<i>The shared space and problems of national planning</i>	200

13 Conclusion 203
